## Part 1

# What Aurumix is and how it works

---

1. Aurumix in brief
  2. The problem: saving in gold today
  3. How Aurumix works
  4. Who can join
-

# 1. Aurumix in brief

Aurumix lets you save in real gold from USD 20 a month. Each gram is held for you in a vault in Dubai. You receive one AURX token for every gram you own.

|                                                      |                                                   |                                                |
|------------------------------------------------------|---------------------------------------------------|------------------------------------------------|
| <div>1 AURX</div> <div>EQUALS ONE GRAM OF GOLD</div> | <div>USD 20</div> <div>MONTHLY PLAN MINIMUM</div> | <div>None</div> <div>STORAGE OR EXIT FEE</div> |
|------------------------------------------------------|---------------------------------------------------|------------------------------------------------|

- 1

**Real gold by the gram.**  
99.99% pure bars from LBMA-accredited refiners.
- 2

**Ownership outside Aurumix.**  
A trust holds the gold for AURX holders.
- 3

**An easy way in.**  
A monthly plan from USD 20, plus one-off purchases.
- 4

**An easy way out.**  
Sell back for cash at the next gold price.
- 5

**Benefits for steady saving.**  
Your Investor Conviction Score (ICS) rewards regular saving with better terms.
- 6

**Services on top.**  
A credit line, a Gold Card and family transfers.

**Figure 1.** Aurumix at a glance. Bank money in, gold held in trust, one AURX per gram, and cash back at the next LBMA price.

## 2. The problem: saving in gold today

Millions of Gulf households, especially South Asian families, save in gold every month. Few routes serve them well.

| ROUTE                | WHERE IT FALLS SHORT                                   |
|----------------------|--------------------------------------------------------|
| Jewellery            | Making charges add to the price. Resale is marked down |
| Coins and small bars | High mark-ups at small sizes. You store them yourself  |
| Bank gold accounts   | Usually unallocated. No bars are held for you          |
| Most gold tokens     | Built for traders. No savings plan                     |

## 3. How Aurumix works

### 3.1 The gold

| FEATURE | DETAIL                                                               |
|---------|----------------------------------------------------------------------|
| Metal   | Gold, 99.99% pure                                                    |
| Source  | Refiners accredited by the London Bullion Market Association (LBMA)  |
| Form    | Serial-numbered bars, checked by an independent assayer on arrival   |
| Storage | Allocated bars in a Dubai vault, separate from any gold Aurumix owns |

### 3.2 One token, one gram

**One AURX always equals one gram of gold. If your app shows 7.8200 AURX, you own 7.8200 grams. Aurumix never takes fees out of your grams.**

### 3.3 What you own and who holds it

You own your share of identified, serial-numbered bars, recorded to the fraction of a gram. A separate trust in the Dubai International Financial Centre (DIFC) is the legal owner of the bars. It holds them for whoever holds AURX, away from Aurumix's creditors.

**Figure 2.** One token, one gram. The bar, the trust, the ledger and the app all describe the same gram. A transfer changes only the ledger.

### 3.4 Who does what

Aurumix issues AURX, buys the gold and runs the buyback. Licensed partners do the lending and issue the card.

**Figure 3.** Who does what. Aurumix is the issuer. Licensed partners hold, check, lend and issue the card.

## 4. Who can join

**Your country of residence decides, whatever your passport. UAE-based non-resident Indians can join.**

| WHERE YOU LIVE                  | CAN YOU JOIN?                                        |
|---------------------------------|------------------------------------------------------|
| United Arab Emirates            | Yes                                                  |
| India (residents)               | No                                                   |
| United States                   | No                                                   |
| Countries on the FATF blacklist | No                                                   |
| Other countries                 | Only where local rules allow. The list is in the app |

## Part 2

# Buying and selling

---

5. Buying gold

---

6. Selling your gold back

---

# 5. Buying gold

## 5.1 Two ways to buy

|                       | MONTHLY SAVINGS PLAN (SIP)        | SPOT PURCHASE |
|-----------------------|-----------------------------------|---------------|
| When                  | Once a month, on your chosen date | Any time      |
| Amount                | From USD 20                       | From USD 20   |
| Builds your ICS score | Yes                               | No            |

## 5.2 Getting started

**Figure 4.** Getting started. Six steps from opening an account to the first monthly payment.

Aurumix accepts bank money only. It does not accept cryptocurrency or stablecoins.

## 5.3 How you pay

Aurumix never pulls money from your account. Each month you approve a one-tap request in your banking app through AANI, the UAE's instant payment system [2]. Or you prefund several months in one transfer.

**Figure 5.** Two ways to pay. A one-tap request each month, or one prefund that Aurumix draws from on your date.

# 5.4 What happens when you pay

Every purchase follows one order: money, then title, then token. The price is the first LBMA Gold Price [1] after your money clears. Aurumix aims to finish within 24 hours.

Figure 6. What happens when you pay. Money, then title, then token: every purchase runs in this order.

## 5.5 A worked example

John pays USD 75 into his monthly plan. He has no tier yet, so his entry fee is 5%.

| STEP                        | AMOUNT                        |
|-----------------------------|-------------------------------|
| Payment                     | USD 75.00                     |
| Entry fee (5%)              | USD 3.75                      |
| Goes to gold                | USD 71.25                     |
| Gold price at the next fix  | USD 109.31 per gram           |
| Gold and AURX John receives | <b>0.6518 g / 0.6518 AURX</b> |

At the Gold tier his fee falls to 4.2%, so the same USD 75 buys 0.6573 g.

## 5.6 Large purchases

Larger purchases need more checks. Very large buyers can purchase a whole bar at a quoted price.

**Figure 7.** Large purchases. Checks step up with the size of the purchase.

## 5.7 The gold float

Dealers sell whole bars, but savers buy fractions of a gram. The gold float is a small stock of bars Aurumix buys with its own money to fill small purchases. It never counts as backing for AURX.

**Figure 8.** The gold float. A small stock of Aurumix's own bars lets savers buy and sell fractions of a gram.

## 6. Selling your gold back

You can sell any amount back to Aurumix for cash at any time, at the next LBMA Gold Price. There is no fee. Cash goes to your own bank account, and Aurumix does not deliver physical gold.

*Example: Sophie sells 10 g at USD 110.00 per gram. She receives USD 1,100.00.*

**Figure 9.** Selling your gold back. Checks first, then the next LBMA price, then cash to your own bank.

## 6.1 How long it takes

Most sales are paid the next business day. Large sales take up to five business days and may be paid in stages.

## 6.2 If many people sell at once

New purchases cover most sales through the float. Sales pause only if the gold market closes or the vault fails, never for lack of cash. Your gold stays yours in the trust either way.

## Part 3

# The score and its benefits

---

7. The Investor Conviction Score

---

8. The five benefits

---

# 7. The Investor Conviction Score

## 7.1 What the score does

The ICS runs from 0 to 100. It measures how steadily you save, never how much. A saver paying USD 20 a month and one paying USD 2,000 reach the top tier on the same day.

## 7.2 The first six months

Your score starts after six monthly payments in a row of at least USD 20, called Confirmed SIP. It is permanent. You start at Silver (score 25) and never fall below it.

**Figure 10.** The first six months. Six payments in a row unlock Confirmed SIP, which is permanent and starts the score at 25.

## 7.3 How the score works

| MEASURE | WHAT IT COUNTS                                                |
|---------|---------------------------------------------------------------|
| Record  | Months paid since your six-month run began. Never goes down   |
| Recent  | How many of the last 12 months you paid                       |
| Kept    | How much of your gold you still hold compared with a year ago |

**Figure 11.** How the score is worked out. Record and Recent set the score. Kept reduces it only after heavy selling.

Any amount from USD 20 counts the same. The score is tied to you and does not move with your tokens.

## 7.4 The tiers

| TIER             | SCORE    | WHAT IT TAKES                                                                 | EARLIEST MONTH |
|------------------|----------|-------------------------------------------------------------------------------|----------------|
| No tier          | None yet | Confirmed SIP not yet reached                                                 |                |
| <b>Silver</b>    | 25       | Six payments in a row                                                         | 6              |
| <b>Gold</b>      | 50       | 12 months paid, and 6 of the last 12                                          | 12             |
| <b>Platinum</b>  | 75       | 36 months paid, and 9 of the last 12                                          | 36             |
| <b>Sovereign</b> | 100      | 60 months paid, 12 of the last 12, and no more than 30% sold in the last year | 60             |

**Figure 12.** The tiers. Five rungs, set by months paid and paid months in the last 12.

## 7.5 What a missed month costs

Mark has reached Sovereign. If he misses 1 to 3 months in a row he drops to Platinum, and after 4 he drops to Gold. When he resumes, about nine steady months restore Platinum.

**A lower score changes your benefits only. It never touches your gold.**

**Figure 13.** What a missed month costs. Mark misses four months as a Sovereign saver. His tier dips and recovers. His grams never move.

If you become resident in India, your account pauses. You keep your gold.

## 8. The five benefits

---

### 8.1 What each tier gets

Credit and the Gold Card are open to **every customer** at base terms: 40% loan-to-value and the L1 card. Tiers improve the terms.

| BENEFIT                                    | NO TIER  | SILVER     | GOLD       | PLATINUM   | SOVEREIGN  |
|--------------------------------------------|----------|------------|------------|------------|------------|
| <b>1. Entry-fee discount</b>               | None     | 0.4 points | 0.8 points | 1.2 points | 1.5 points |
| <b>2. Credit: loan-to-value</b>            | 40%      | 40%        | 50%        | 65%        | 80%        |
| <b>3. Card level</b>                       | L1       | L1         | L1         | L2         | L3         |
| <b>3. Card FX margin</b>                   | Standard | Standard   | 2.0%       | 1.5%       | 1.0%       |
| <b>3. Card ATM allowance (AED a month)</b> | Standard | Standard   | 1,000      | 2,500      | 5,000      |
| <b>4. Gold Rewards rate</b>                | None     | None       | 0.15%      | 0.45%      | 0.75%      |
| <b>5. Family plan fee discount</b>         | None     | 10%        | 20%        | 35%        | 50%        |
| <b>5. Per-beneficiary fee discount</b>     | None     | None       | None       | 10%        | 20%        |

## 8.2 Rules for every benefit

A lower tier never takes back what you already received. No benefit grows with the amount you save.

## 8.3 When each benefit starts

Fee and family plan discounts apply from launch. Credit, the card and Gold Rewards follow once the licensed partners are in place.

## Part 4

# Credit, card and rewards

---

9. Credit and the Gold Card

---

10. Gold Rewards

---

## 9. Credit and the Gold Card

### 9.1 One credit line, two ways to use it

One gold-secured credit line lets you use your gold's value without selling it. Draw cash to your bank, or spend with the Gold Card.

**Figure 14.** One credit line, two ways to use it. Pledged grams back one line, drawn as cash or spent on the Gold Card.

### 9.2 Your borrowing limit

Your limit is your eligible grams (held at least 90 days) times the gold price times your loan-to-value (LTV). Emma holds 100 g at USD 109.31 per gram:

| EMMA'S TIER       | LTV | LIMIT ON USD 10,931 OF GOLD |
|-------------------|-----|-----------------------------|
| No tier or Silver | 40% | USD 4,372.40                |
| Gold              | 50% | USD 5,465.50                |
| Sovereign         | 80% | USD 8,744.80                |

**Figure 15.** Your borrowing limit. Limit = eligible grams × gold price × loan-to-value.

The lender shows its costs before you draw.

### 9.3 The Gold Card

Every customer can have the L1 card. Each payment is checked live against your gold.

**Figure 16.** The Gold Card by tier. Every customer gets the L1 card. Higher tiers improve the level, FX margin and ATM allowance.

The card never downgrades, and a tier fall never closes it.

## 9.4 If the gold price falls

A lower gold price raises your loan as a share of your pledged gold. Aurumix warns you early and sells only what is needed.

**At Sovereign with a full limit, a 13% gold fall triggers a sale. Borrowing less gives you more room.**

**Figure 17.** If the gold price falls. Warnings at 85% and 88%. Only at 92% is some gold sold, just enough to get back to 88%.

## 10. Gold Rewards

**Gold Rewards is cashback in gold on card spending.** Each month your tier's rate is applied to your Gold Card spend and credited in grams. It starts at the Gold tier.

| TIER               | RATE ON CARD SPEND |
|--------------------|--------------------|
| No tier and Silver | None               |
| Gold               | 0.15%              |
| Platinum           | 0.45%              |
| Sovereign          | 0.75%              |

*Example: Emma is at Platinum and spends USD 800 on her card in March. Her reward is USD 3.60, or 0.0329 g at USD 109.31 per gram.*

Rewards are funded from the fees merchants pay on card payments (interchange). Your gold balance plays no part.

**Figure 18.** How Gold Rewards is paid. Cashback in gold on card spending, funded by card revenue.

## Part 5

# Family, partners and the token

---

11. Family Portfolio and succession

---

12. Partners, agents and referrals

---

13. The AURX token

---

# 11. Family Portfolio and succession

## 11.1 Two family features

| FEATURE                          | WHAT IT DOES                                                            |
|----------------------------------|-------------------------------------------------------------------------|
| Family Portfolio                 | Sets aside gold for named family members. It stays yours until it moves |
| Beneficiary Transfer Instruction | Moves gold to named people when a set event happens                     |

Both are open to every customer on the family plan.

## 11.2 Triggers

| TRIGGER     | EXAMPLE                       | WHEN GOLD MOVES                          |
|-------------|-------------------------------|------------------------------------------|
| A date      | A child's 18th birthday       | On the date                              |
| A condition | Starting university, marriage | Once the event is shown to have happened |
| Death       |                               | After a court grant of probate           |

Probate cannot be avoided, but verified beneficiaries can receive gold within days of the grant.

**Figure 19.** How family gold moves. Three triggers, one path: re-verify the beneficiary, settle any loan, then move the gold.

## 11.3 What Aurumix does and does not do

| AURUMIX DOES                                        | AURUMIX DOES NOT                      |
|-----------------------------------------------------|---------------------------------------|
| Carry out your written standing instruction         | Decide who is entitled to an estate   |
| Wait for a court grant before any transfer on death | Write, witness or register a will     |
| Register and monitor your beneficiaries             | Give estate, tax or succession advice |

## 11.4 Price

The family plan costs USD 32 a year and covers up to four beneficiaries. Each extra beneficiary costs USD 20, with a household cap of about USD 60 a year. Tier discounts apply (section 8.1).

Example: Emma is at Platinum and names five beneficiaries.

| ITEM                     | PRICE     | DISCOUNT | EMMA PAYS |
|--------------------------|-----------|----------|-----------|
| Family plan (four names) | USD 32.00 | 35%      | USD 20.80 |
| Fifth beneficiary        | USD 20.00 | 10%      | USD 18.00 |
| Total a year             |           |          | USD 38.80 |

## 12. Partners, agents and referrals

### 12.1 The partner channel

Wallets, neobanks and payment apps can offer Aurumix gold inside their own apps. Their customers get the same gold and protections, but no ICS score.

**Figure 20.** The partner channel. Partners sell Aurumix gold inside their own apps and pay a platform fee.

The partner pays Aurumix a platform fee of about 0.50 to 0.75% a year on its customers' gold.

## 12.2 Agents

Contracted agents must tell customers they are paid. Aurumix answers for what they say.

## 12.3 Member referrals

A one-time reward in grams goes to both people once the new customer reaches Confirmed SIP. The programme runs only once VARA has confirmed it.

# 13. The AURX token

---

## 13.1 Token facts

| FEATURE         | DETAIL                                                                      |
|-----------------|-----------------------------------------------------------------------------|
| Name and symbol | Aurumix, AURX                                                               |
| Standard        | An ERC-20 token on Ethereum [3]                                             |
| Backing         | 1 AURX = 1 gram of allocated gold                                           |
| Supply          | No fixed cap. Created when gold is allocated, burned when gold is sold back |
| Allocations     | None. No team, investor or treasury tokens and no pre-mine                  |
| Transfers       | Open, subject to a blocklist                                                |

## 13.2 Identity at the two doors

Identity is checked when AURX is created and when it is sold back. In between, AURX moves like any ERC-20 token.

**Figure 21.** Identity at the two doors. Identity is checked when AURX is created and when it is sold back. In between it moves freely.

Sending AURX moves ownership of the gold while the bars stay in the vault. Aurumix charges no fee to send, but Ethereum charges its own network fee.

## 13.3 Controls Aurumix holds

| CONTROL                     | WHEN IT IS USED                                                          |
|-----------------------------|--------------------------------------------------------------------------|
| <b>Blocklist and freeze</b> | Stop an address or balance moving, for sanctions, a court order or fraud |
| <b>Seize and reissue</b>    | Where a court or the law requires, or to restore tokens to their owner   |
| <b>Pause minting</b>        | Automatically, if backing cannot be confirmed                            |
| <b>Upgrade</b>              | If the law requires, for example limiting holding to verified customers  |

## 13.4 Trading elsewhere

AURX may trade on other venues at prices that differ from the gold price. Aurumix does not set those prices or promise any listing.

---

# 14. Safety and transparency

## 14.1 The backing rule

**Gold held in the trust must always at least equal the AURX in circulation.** The system checks this continuously and stops minting if it cannot be confirmed.

## 14.2 The monthly Allocation Report

Every month Aurumix publishes each bar's serial number and assay certificate, total AURX against total gold held, and the float balance shown separately.

**Figure 22.** Layers of protection. Four layers record that the gold is held for you, checked by a monthly report.

## 14.3 Separation and layers of ownership

Your money sits in a UAE bank client account until the gold is yours. After that, four layers record that the gold is held for you: allocated bars, your customer terms, the DIFC trust [4] and an independent title register. If one layer is challenged, the others still stand.

## 14.4 If Aurumix winds down

Aurumix keeps a wind-down plan that never depends on selling customer assets. Holders are bought out within a published claim window.

# 15. Fees at a glance

|                                                                   |                                        |                                     |
|-------------------------------------------------------------------|----------------------------------------|-------------------------------------|
| <div>2% to 5%</div> <div>ENTRY FEE, LESS YOUR TIER DISCOUNT</div> | <div>None</div> <div>STORAGE FEE</div> | <div>None</div> <div>EXIT FEE</div> |
|-------------------------------------------------------------------|----------------------------------------|-------------------------------------|

## 15.1 What you pay

| FEE          | AMOUNT                                                                                                     | WHEN            |
|--------------|------------------------------------------------------------------------------------------------------------|-----------------|
| Entry fee    | 2% to 5% of each purchase, 5% at launch, less your tier discount                                           | Each purchase   |
| Storage fee  | None                                                                                                       | Never           |
| Exit fee     | None                                                                                                       | Never           |
| Sending AURX | No Aurumix fee. Ethereum network fee applies                                                               | Each transfer   |
| Gold Card    | L1 on the issuer's standard terms. Better terms by tier                                                    | As you use it   |
| Credit       | Set by the licensed lender, shown before you draw                                                          | When you borrow |
| Family plan  | USD 32 a year for up to four names, USD 20 per extra name, capped at about USD 60, less your tier discount | At registration |

The entry fee is shown before you pay. Aurumix adds no mark-up to the LBMA price.

# 15.2 How Aurumix earns

**Figure 23.** How Aurumix earns. Six fee sources. Three things are never charged.

Aurumix earns from the fees above, card revenue and partner platform fees.

# 16. Legal and regulatory status

## 16.1 Regulators

| REGULATOR                                               | WHAT IT COVERS                                       |
|---------------------------------------------------------|------------------------------------------------------|
| <b>VARA</b> (Dubai Virtual Assets Regulatory Authority) | Issuing AURX, this whitepaper and marketing          |
| <b>CBUAE</b> (Central Bank of the UAE)                  | Lending and card issuance, through licensed partners |
| <b>DFSA</b> (Dubai Financial Services Authority)        | The DIFC trust                                       |

## 16.2 Licence

Aurumix intends to apply to VARA for a Virtual Asset Issuance licence [5]. AURX is designed as an Asset-Referenced Virtual Asset (ARVA) in which holders own the gold itself. AURX will be offered only after VARA grants the licence and approves this whitepaper.

**Figure 24.** Path to launch. AURX is offered only after VARA grants the licence and approves the whitepaper.

## 16.3 Positions that rest on legal reading

These positions are being confirmed with legal advisers and, where needed, the regulator. None has been tested in court.

- **Ownership moves with the token.**
- **Gold in the trust is protected if Aurumix fails.**
- **The buyback is a redemption right** under VARA's rules.
- **The trust is not an investment fund.**
- **A lender can take valid security** over a customer's gold.
- **The family features are standing instructions**, not estate or trustee services.

If a reading changes, the design changes with it, most likely by limiting AURX holding to verified customers.

## 16.4 What AURX is

- AURX represents ownership of gold. Holding it earns no payments.
- Customers get no share of Aurumix's profits.
- Benefits depend on saving behaviour and card use, never on the amount of gold held.

# 17. Risks

| RISK                     | WHAT COULD HAPPEN                               | HOW IT IS LIMITED                         |
|--------------------------|-------------------------------------------------|-------------------------------------------|
| <b>Gold price</b>        | AURX falls in value with gold                   | Nothing removes this                      |
| <b>Borrowing</b>         | A price fall forces a partial sale              | Two notices and 14 days to act            |
| <b>Legal structure</b>   | A court rejects a reading in section 16.3       | Four ownership layers                     |
| <b>Aurumix failure</b>   | Aurumix fails as a business                     | Gold in the trust, a wind-down plan       |
| <b>Buyback pressure</b>  | Many sell at once                               | The float, and large sales paid in stages |
| <b>Partners</b>          | The dealer, vault, lender or card issuer leaves | Gold stays in the trust                   |
| <b>Card systems</b>      | An outage stops live gold checks                | Small, capped backup approvals            |
| <b>Secondary markets</b> | AURX trades below the gold price elsewhere      | The LBMA-price buyback stays open         |
| <b>Regulatory change</b> | New rules change who can hold AURX              | Upgradeable contract                      |
| <b>Payments</b>          | Providers raise prices                          | Missed payments cost nothing              |

# Glossary

Terms used in this whitepaper

| TERM                       | MEANING                                                                                         |
|----------------------------|-------------------------------------------------------------------------------------------------|
| <b>Allocated gold</b>      | Specific, serial-numbered bars held for customers                                               |
| <b>ARVA</b>                | Asset-Referenced Virtual Asset. VARA's category for a token linked to a real asset such as gold |
| <b>Confirmed SIP</b>       | Six monthly payments in a row. Starts your score. Permanent once reached                        |
| <b>ERC-20</b>              | The standard token format on Ethereum, supported by most wallets and exchanges                  |
| <b>The fix</b>             | The LBMA Gold Price, set twice each London business day                                         |
| <b>The float</b>           | Aurumix's own small stock of bars. It fills small purchases and never counts as backing         |
| <b>Gold Rewards</b>        | Cashback in gold on Gold Card spending, funded by card revenue                                  |
| <b>ICS</b>                 | Investor Conviction Score. A 0 to 100 score of how steadily you save                            |
| <b>Interchange</b>         | A small fee on each card payment, paid by the merchant's side                                   |
| <b>LBMA</b>                | London Bullion Market Association. Sets gold market standards                                   |
| <b>Loan-to-value (LTV)</b> | The amount borrowed as a share of the pledged gold's value                                      |
| <b>Probate</b>             | The court process that confirms who inherits after a death                                      |
| <b>SIP</b>                 | Systematic investment plan. Your monthly savings plan                                           |
