

LynxCap LCL Opportunities 3 Digital Bond

Risk Disclosure Statement

11th May 2026

1. Purpose of this Notice

This notice provides a description of the risks associated with investing in and trading Virtual Assets, including LynxCap LCL Opportunities 3 Digital Bond (the "Token").

2. Risk of Loss

Investment in the Token involves a risk of loss of part or all of the invested capital.

Returns are not guaranteed.

The value of the Token reflects the performance of the underlying LCL Opportunities Bond and may fluctuate due to changes in market conditions, interest rates, credit conditions, and liquidity dynamics. Investors may receive less than their original investment, or nothing at all.

3. Nature of the Product and Rights

The Token is a digital representation of an investor's economic exposure to a Luxembourg issued Senior Secured Bond accessed through Tokinvest's platform.

The Token:

- does not represent legal or beneficial ownership of the Bond or underlying assets;
- does not constitute a claim on the issuer of the Bond (outside those assets specifically identified in the Bond prospectus); and
- does not constitute a claim on the general assets of Tokinvest.

Tokenholders have contractual rights solely against Tokinvest in respect of:

- platform access;
- submission of purchase and sale (where permissible) instructions; and
- receipt of economic outcomes as recorded in Tokinvest's internal systems.

All rights are contractual in nature and dependent on the proper functioning of the platform and upstream distribution arrangements.

4. No Direct Relationship with Bond Issuer

Investors:

- are not registered as Token holders in the Cap Table of the issuer;
- have no direct contractual or legal relationship with LCL Opportunities 3; and
- cannot exercise rights directly against the issuer.

Access to the Token is entirely intermediated through Tokinvest and any other distribution partners appointed by the issuer.

5. Intermediation Chain Risk

Investment in the Token relies on a multi-party structure involving:

- Tokinvest (platform and licensed distributor);
- the Token issuer and its administrators and custodians.

Failure, delay, or disruption at any level may:

- delay or prevent execution of subscriptions or redemptions;
- affect pricing, settlement, or availability of liquidity; or
- impair investor access to economic outcomes.

Investors are exposed to the operational and financial performance of each entity in this chain.

6. Tokinvest Custody Model

Virtual Assets held via the platform are under the control of Tokinvest. Tokinvest is not a VARA-regulated custodian and provides custody only as an incidental activity to its Brokerage Services, utilising third-party VARA-regulated custodians and/or custody technology providers.

Custody arrangements may involve multiple layers of infrastructure, and failures at any level may affect access to Tokens.

7. No Investment Advice

Tokinvest does not provide financial, legal, tax, or investment advice.

Nothing in this Notice constitutes a recommendation or personalised advice.

Investors are responsible for conducting their own independent assessment.

8. No Clearing or Third-Party Brokerage

Tokinvest does not provide clearing services for other VASPs and does not introduce clients to other VASPs.

9. Not Exhaustive

This Notice does not set out all risks.

The risks applicable to any investment depend on individual circumstances and transaction terms.

10. General Risk Categories

Risks include:

- liquidity risk;
- market risk;
- settlement risk;
- currency risk;
- operational risk;
- regulatory risk;
- legal risk; and
- barriers to divestment.

11. Tokinvest Insolvency Risk

In the event of Tokinvest insolvency:

- investors rely on contractual rights, internal records, and custody arrangements;

- access to the platform and Tokens may be restricted or suspended;
- investor positions may be subject to reconciliation processes across internal records, custody providers, and the issuer of the Tokens;
- recovery of value depends on the effectiveness of segregation arrangements and record accuracy; and
- delays, partial recovery, or total loss may occur.

There is no assurance that investor interests will be fully protected or that access to underlying asset exposure can be preserved in a timely manner.

12. Counterparty Risk

Tokinvest relies on the Token Issuer to transact and deliver the Token.

Failure or disruption of the Token Issuer may:

- delay or prevent execution;
- impact pricing or settlement;
- impair investor access to the Token; and
- lead to potential financial loss.

Conflicts of Interest

14. Conflicts Framework

Tokinvest performs ongoing conflicts-of-interest assessments across its roles as platform operator and distributor.

Conflicts are managed through governance controls, segregation of duties, and compliance oversight.

15. Principal Trading

Tokinvest may, in limited circumstances, act as principal solely to facilitate settlement of matched transactions.

It does not engage in proprietary or speculative trading.

16. Fee Incentive Risk

Fees are fixed, disclosed, and applied uniformly.

However, fee structures may create incentives related to transaction volume or platform usage.

17. Tax and Legal Risk

Tokinvest does not advise on tax or legal consequences.

Investors are responsible for compliance with applicable laws.

18. Acknowledgement of Risk

Users acknowledge and accept the risks described in this Notice.

19. Reliance on Documentation

Investors must read the whitepaper and all relevant documentation included within.

Market and Virtual Asset Risks

20. Market Risk

The market price of the Token may, at times, diverge materially from the value or indicative net asset value of the underlying bond due to factors including limited liquidity, fragmented trading venues, differences in supply and demand for the token, operational or technological constraints, market sentiment toward digital assets generally, and the absence of active market makers or arbitrage mechanisms.

21. Financial Crime Risk

Virtual Asset markets may be exposed to fraud, manipulation, or illicit activity.

22. Cybersecurity Risk

Systems may be subject to cyber-attacks, data breaches, or operational compromise.

23. Transparency and Ownership Risk

Blockchain addresses do not identify beneficial ownership.

Verification of ownership may be dependent on platform records.

24. Core Virtual Asset Risks

Virtual Assets:

- may lose value;
- may not be transferable;
- may be illiquid; and
- may be subject to theft or fraud.

25. Regulatory Risk

Regulation may evolve and affect:

- access;
- transferability; and
- platform operations.

26. Technology and Internet Risk

Platform access may be disrupted due to connectivity or system failures.

27. Emerging Technology Risk

Virtual Assets operate within a rapidly evolving technological environment.

28. Legal Uncertainty

Legal treatment may vary across jurisdictions.

29. Wallet and Access Risk

Loss of credentials may result in loss of access to Tokens.

30. Valuation Risk

Pricing of the Token may differ from the underlying bond price due to:

- timing differences between bond and Token pricing;
- subscription and redemption processing delays;
- applicable fees and charges;

- liquidity conditions; and
- market sentiment in any secondary market.

Investors may not be able to transact at the bond price and may experience pricing that differs materially from the underlying asset valuation.

31. Distributed Ledger Technology Risk

DLT systems may:

- experience downtime;
- be subject to protocol changes; or
- be exposed to security vulnerabilities.

32. Amendments

Tokinvest may amend this Notice in accordance with regulatory requirements.

33. Fiat and Payment Provider Risk

Tokinvest relies on third-party banking and payment providers.

Failures or restrictions may affect funding and withdrawals.

Bond-Specific Risks

34. Bond Risks

The underlying bond is subject to:

- interest rate risk;
- credit risk;
- liquidity risk; and
- counterparty risk.

The underlying bonds have senior secured status which, although typically lower risk than unsecured instruments, may incur losses and do not guarantee capital preservation.

35. Token Pricing Risk

The Token is intended to reflect the market value of the underlying bond; however, pricing may diverge due to:

- operational timing differences between bond and token pricing;
- fees and charges applied at platform or transaction level;
- foreign exchange movements (where applicable); and
- supply and demand dynamics in any secondary market.

Whilst Token redemption at maturity is contractually fixed at the same value as the underlying bond, if earlier redemption is sought via a secondary market investors may realise proceeds above or below the underlying bond price at the time of execution depending on market conditions.

36. Redemption Risk

Redemption of Tokens occurs at maturity and proceeds are passed from the Token Issuer to Tokinvest for distribution.

Investors are exposed to the credit, operational, and liquidity risks of the Tokinvest (and any additional

intermediaries in the redemption chain such as banks or other financial institutions), including the risk that Tokinvest fails, delays, or is unable to distribute proceeds in a timely manner or at all.

Technology and Platform Risks

37. Smart Contract Risk

Tokens rely on smart contract infrastructure which may contain vulnerabilities, coding errors, logic flaws, or unforeseen interactions.

These may result in:

- incorrect or unintended execution of transactions;
- loss, freezing, or misallocation of Tokens;
- disruption to platform functionality; or
- the need for administrative intervention.

While Tokinvest implements governance, review, and audit processes, no assurance can be given that smart contracts are free from defects or will operate as intended in all circumstances.

38. Secondary Market Risk

Secondary market liquidity is not guaranteed.

Investors may be unable to sell Tokens or may only do so at a discount.

39. Platform Suspension Risk

Tokinvest may suspend access to the platform, in whole or in part, for operational, security, legal, or regulatory reasons.

During any period of suspension:

- investors may be unable to access their accounts;
- transactions, including subscriptions, redemptions, and transfers, may be delayed or prevented; and
- access to Token-related functionality may be restricted.

Tokinvest does not guarantee uninterrupted platform availability.

40. Regulatory Intervention and Licence Risk

Regulatory authorities may impose restrictions, conditions, or directions affecting Tokinvest's operations, including the handling of Tokens and related Client Assets.

Such actions may:

- restrict or suspend trading, subscriptions, or redemptions;
- impose additional compliance or reporting requirements;
- require changes to platform operations; or
- result in the suspension or revocation of Tokinvest's licence.

These actions may materially affect investor access, liquidity, and outcomes.

41. Geo-Restriction Risk

Access may be restricted based on jurisdiction.

Users may lose access due to regulatory changes.
