

Tokinvest DMCC
Tradeflow Warrant (1971 Silver Bar Commodity) token
Virtual Asset Whitepaper – DTFW
7 September 2026

REGULATORY DISCLAIMER

VARA has not taken any steps to verify the information set out in this whitepaper, including its accuracy and completeness, and has no responsibility for any loss arising from reliance on it. The liability for the content of the whitepaper lies with the Issuer.

This whitepaper is a regulated disclosure document prepared in accordance with the requirements of the Dubai Virtual Asset Regulatory Authority (VARA). It is intended to provide prospective investors with a clear explanation of the structure, risks, and economic characteristics of the Token.

Core Product Sections (Sections 1–9)

These sections contain the primary investor-facing disclosure and should be read first:

1. Key Features & Core Definitions
2. Product Overview
3. Parties, Roles & Responsibilities
4. Reference Asset & Asset Structure
5. Token Economics & Distribution Mechanics
6. Issuance, Subscription & Token Supply
7. VA Trading Platform, Secondary Market Trading & Pricing
8. Structural Limitations & Governance Mechanisms
9. Legal Structure & Investor Protections

Appendices (Supporting Disclosures)

The appendices contain supporting detail required for completeness and regulatory transparency:

- | | |
|------------|---|
| Appendix A | Issuer Overview, Governance & Regulatory Status |
| Appendix B | Tradeflow Warrant and Asset Custody Details |
| Appendix C | Tokenisation, Custody, Settlement and Flow of Funds |
| Appendix D | Additional Regulatory Disclosures and Definitions |
| Appendix E | Supplementary Documentation Details |

This whitepaper does not constitute investment advice, a recommendation, or a forecast of performance. Prospective investors should read this whitepaper together with the applicable Risk and Disclosure Statement and issuance-specific documentation, and should assess the product in light of their own financial circumstances, objectives, and risk tolerance.

The appendices form an integral part of this whitepaper. However, not all investors will need to read every appendix in full.

1. KEY FEATURES & CORE DEFINITIONS

This section sets out the principal features of the Token and establishes the key roles, assets, and economic concepts used throughout this whitepaper. Capitalised terms introduced here are used consistently in the sections that follow.

Issuer and Reference Asset Owner

Tokinvest DMCC, in its capacity as the regulated issuer of the DTFW Tokens (the “**Issuer**”).

Tokinvest DMCC, also holds and maintains full title of ownership of the tokenised Tradeflow Warrant. Each token entitles the holder to fractional ownership of the underlying Reference Asset as Tokinvest holds the Reference Asset solely in its capacity as trustee for the benefit of Tokenholders and not in its personal or proprietary capacity.

As a VARA-licensed broker-dealer and issuer, Tokinvest intends to undertake additional issuances in the future, aligned with its strategic roadmap and subject to regulatory approvals.

Token

The DTFW token issued under this whitepaper, representing a contractual, time-limited economic participation right linked to a defined Reference Asset (the “**Token**”).

Product Type

Asset-Referenced Virtual Asset (ARVA), issued under the Dubai Virtual Assets Regulatory Authority (VARA) framework.

Reference Asset

A specified DMCC Tradeflow Warrant which represents full legal title to the underlying asset described in the warrant. In purchasing the Reference Asset the ownership rights associated with the Reference Asset are passed to The Issuer in a legally and contractually binding manner. The unique Warrant Number which identifies the Reference Asset is **SAM2T** and a copy of the Tradeflow Warrant can be found in Appendix B.

Custodian

The Underlying Asset to which each warrant relates is held in physical custody by an independent third-party custodying agent (the “**Custodian**”), which may include Brinks or another internationally recognised vaulting and logistics provider, pursuant to a custody or storage agreement entered into with the relevant warehouse operator or warrant holder.

Underlying Asset

A DMCC Tradeflow Warrant provides a clear, enforceable security interest over an underlying commodity held in DMCC-approved storage facilities. The underlying asset which is held by the Reference Asset for this whitepaper is **1,971kg of high purity silver minted into a world record breaking individual bar**. This is a unique and historically relevant item minted to celebrate the 50-year anniversary of the formation of the United Arab Emirates (the “**Underlying Asset**”).

Economic Nature of the Token

Each Token represents a direct, undivided and fractional beneficial interest in the Trust Property (being the Reference Asset and associated rights held on trust), and such interest shall be enforceable against Tokinvest and any successor, liquidator, administrator or insolvency officer.

Economic Term

The fixed economic term applicable to a Token issuance, being **ten (10) years** commencing at issuance and ending at expiry, where Tokenholders may participate in net sale proceeds (if any) generated by the Reference Asset (the “**Economic Term**”).

Token Price

The price per Token is set at the time of issuance (the “**Token Price**”). Note that as the Underlying Asset commodity described by the Reference Asset is high purity silver, the issued token price can only be determined at a specific time on the issuance date and referenced to the prevailing market price with a pre-determined numismatic (or collectibility) premium due to the historical relevance and unique nature of the Underlying Asset.

Subscription Period

The fixed subscription window during which eligible investors may submit binding subscriptions for Tokens, being a period of **thirty (30) days**, with an option for Tokinvest to extend for a further 30 day periods if necessary to support a completed subscription (the “**Subscription Period**”).

Yield/Revenue Distributions

Tradeflow warrants are not yield-bearing assets and there are no revenue or other periodic distributions for this token.

Cost Structure

Tokenholders are not liable for any future operating, maintenance, management, insurance or storage costs through the life of the token. All transaction and related costs are detailed clearly in **section 6** of this whitepaper.

Expiry

At the end of the Economic Term, the Underlying Asset is sold and the transaction proceeds, net of costs, are distributed proportionally to tokenholders. Once distribution is completed the tokens are burnt with zero residual value.

Secondary Market Trading

Tokens may be traded on the Tokinvest platform and other appropriately licensed venues, subject to market conditions, liquidity, and compliance requirements.

Investor Eligibility

Participation is limited to eligible investors who have completed all applicable AML/KYC, onboarding, and jurisdictional compliance requirements as detailed in this whitepaper.

Risk Profile

Returns are not guaranteed. Commodity prices fluctuate and numismatic premiums may change over time. The value of the tokens is directly linked to the current market value of the Underlying Asset. Tokens may thus lose value in part or in full.

2. PRODUCT OVERVIEW

2.1 Overview and Reason for Public Offer

The DTFW Virtual Asset issue is a commodity-referenced token which represents pass-through fractional ownership of a specific Reference Asset that confers legal title to the Underlying Asset. These rights are created via the Issuer holding, upon successful completion of the subscription process, the Reference Asset on behalf of Tokenholders. It is designed to provide eligible investors with exposure to revenues generated by price performance of real-world commodity assets, through conferring tokenised ownership of the warrant that relates to those assets.

The DTFW gives investors the opportunity to undertake fractional investments in the world's most important commodities with clear oversight of the underlying asset. This differs from investments which purport to track the change in financial value of such assets without an auditable holding of the asset itself. This mitigates risks associated with derivative-based tracking, including tracking error and reliance on intermediary performance, by anchoring token value to a legally identifiable and verifiable asset.

The Issuer has created the first token backed by a DMCC-issued Tradeflow Warrant as the Reference Asset. Tradeflow Warrants offer investors the security of knowing that the referenced commodity asset has been inspected, verified and securely custodied by a world-leading authority and is protected by a clear enforceable security interest.

Each issuance references a specific Reference Asset and provides tokenholders with a contractual, time-limited right to participate in the price performance (if any) generated by the Underlying Asset during a fixed Economic Term.

The Issuer plans to bring additional DTFW tokenised offerings of different Reference Assets that represent underlying commodity ownership in the future. Any new token offering will represent a different Reference Asset and necessitate a new instance of the DTFW token and supporting whitepaper

Token Naming

The Token has been given the short name 'DTFW' as it represents an issuance of tokens fractionalising the Reference Asset; a specific DMCC Tradeflow Warrant which is issued out of Dubai.

Each Token will have its own uniquely identified DTFW name, which describes the underlying commodity asset that is represented by the warrant.

The token name for this Issuance is 'DTFW – 1971 Silver Bar'. This would be the name used on the Issuer's internal platform and would be recorded in the metadata of the smart contract. The on-chain name will be based on the issue number of the specific token TVTVDTFW001 is the first token.

2.2 What the Token Is

Each Token:

- is a Virtual Asset issued under the Issuer's VARA-licensed issuance framework;
- references a single, defined Reference Asset specific to that issuance;
- provides exposure solely to price performance of the Underlying Asset generated during the Economic Term; and
- is designed to expire at the end of a fixed period and return the proportional net sale value of the asset to tokenholders before being burnt for zero residual value.

The Token is intended to function as a price-performance, finite-life instrument rather than as an equity interest, perpetual asset, or yield-paying product.

2.3 What the Token Is Not

The Token does not:

- represent ownership, title, or any proprietary interest in the Issuer;
- include principal protection or guaranteed returns; or
- confer any rights of control, governance, or decision-making over the Underlying Asset, the Reference Asset, or the Issuer.

2.4 Reference Asset Concept

For each issuance, the Reference Asset represents a predefined Underlying Asset as described in the Tradeflow Warrant.

The contractual details of the Reference Asset - including the specific Underlying Asset, quantities, and applicable quality characteristics - are determined prior to launch and disclosed to investors before the Subscription Period opens.

Once an issuance is completed, the Reference Asset associated with that issuance remains fixed in scope and composition for the duration of the Economic Term.

2.5 Economic Logic

The economic logic of the Token is as follows:

- Tokenholders receive blockchain-based access to fractionalised ownership of the Reference Asset;
- the Reference Asset in turn gives legal ownership rights to the Underlying Asset; and
- the economic value of the Token reflects the market value of the Underlying Asset at any given time.

In cases where the Underlying Asset possesses attributes beyond its intrinsic commodity content—such as artistic, historic or collectible significance—the value of the Token may reflect such attributes in addition to, and independently of, the prevailing market-traded price of the relevant commodity.

The Issuer does not represent that the Token will necessarily track or correlate with commodity benchmark prices, and no assurance is given that any numismatic, collectible or non-commodity value attributed to the underlying asset will be realised upon sale, transfer, or liquidation.

2.6 Role of the Issuer

The Issuer acts as the regulated issuer of the Token and operates regulated issuance and secondary-market infrastructure under the VARA framework. The Issuer is the custodian and manager of the Reference Asset, providing beneficial ownership and fractional entitlement to tokenholders at all times.

Responsibilities and limitations are defined contractually and do not extend to any guarantee of revenue generation or investor returns.

Further detail on the roles, responsibilities, ownership structure, and limitations of each party is provided in Section 3 (Parties, Roles & Responsibilities) and the relevant appendices.

3. PARTIES, ROLES & RESPONSIBILITIES

3.1 Overview

The Token structure involves a limited number of clearly defined parties, each performing a distinct and non-overlapping role in the issuance, operation, and lifecycle of the product.

This section describes the identity of each party, the capacity in which it acts, the assets or rights to which it relates, and the boundaries of responsibility between parties. More detailed legal, governance, and regulatory disclosures are set out in the appendices.

3.2 Tokinvest DMCC – Issuer & Platform Operator

Tokinvest DMCC (“Tokinvest”), in its capacity as the Issuer, acts as the regulated issuer of the Tokens and the operator of the primary issuance and secondary-market trading platform.

In this capacity, Tokinvest is responsible for:

- structuring and issuing the Tokens under its VARA-licensed framework;
- preparing and publishing this whitepaper and associated disclosure documentation;
- maintaining issuance-level records relating to Token ownership and lifecycle events;
- facilitating secondary-market trading on the Tokinvest platform and approved VARA-licensed venues;
- implementing custody and settlement arrangements via regulated third-party providers; and
- ensuring ongoing compliance with applicable VARA rulebooks and regulatory requirements.

The Issuer does not provide investment advice, discretionary portfolio management, fiduciary services, or trustee services to Tokenholders.

Further detail on the Issuer’s regulatory status, governance framework, and internal controls is provided in Appendix A.

3.3 Dubai Multi Commodities Centre (DMCC)

Dubai Multi Commodities Centre (“DMCC”) operates the Tradeflow platform, an electronic registry used for the registration, recording, and administration of commodity ownership instruments, including warehouse warrants. The Reference Asset to which each Token relates is issued, recorded, and maintained within the DMCC Tradeflow system in accordance with the applicable Tradeflow rules and procedures.

DMCC and Tradeflow do not issue, sponsor, guarantee, or endorse the Tokens, and are not a party to the issuance, distribution, transfer, or redemption of the Tokens. DMCC does not act as issuer, custodian, trustee, registrar, broker, or agent in respect of the Tokens, nor does it assume any fiduciary or contractual obligations to Tokenholders.

The role of DMCC is limited to maintaining the Tradeflow registry and facilitating the recognition and transfer of the relevant warrant within its system. Any rights in respect of the Underlying Asset arise

solely through the Reference Asset as governed by the Tradeflow framework and applicable warehouse and storage arrangements, and not through DMCC itself.

DMCC makes no representations or warranties, express or implied, as to the value, condition, existence, or marketability of the Underlying Asset, the performance of the Tokens, or the ability of Tokenholders to realise value from the Reference Asset. DMCC shall not be responsible for any losses arising from the issuance, holding, or transfer of the Tokens or from any act or omission of the Issuer or any third party.

3.4 Custody Agent.

The Custodian's role is limited to the safekeeping, storage, and handling of the Underlying Asset in accordance with the terms of the applicable custody or warehouse agreement. The Custodian does not issue, sponsor, guarantee, or endorse the Tokens and is not a party to the issuance, holding, transfer, or redemption of the Tokens.

The Custodian does not act as trustee, fiduciary, registrar, or agent for Tokenholders and owes no direct contractual or fiduciary duties to Tokenholders. Tokenholders have no direct rights of action against the Custodian. Any rights in respect of the Underlying Asset arise solely through the relevant Reference Asset and are exercisable only in accordance with the terms of that Reference Asset, the applicable Tradeflow rules, and the relevant custody or warehouse arrangements.

The Custodian makes no representations or warranties, express or implied, regarding the existence, quality, condition, valuation, or marketability of the Underlying Asset, and shall not be responsible for any losses arising from the issuance, holding, or transfer of the Tokens or from the acts or omissions of the Issuer or any third party.

3.5 Reference Asset Ownership

The Issuer:

- upon successful completion of the subscription process will hold the contractual title of ownership for the Reference Asset for each issuance; and
- holds such Reference Asset on trust for Tokenholders so that the beneficial ownership rights of the Tokenholders in the Reference Asset shall survive any insolvency, liquidation, administration or restructuring of the Issuer as further described in section 9.3.

3.6 Tokenholders

Tokenholders:

- hold a contractual, time-limited economic interest in the economic performance (if any) generated by the Underlying Asset during the Economic Term;
- are entitled to receive the proceeds of sale of the Underlying Asset in accordance with the terms of the relevant issuance;
- can redeem their tokens for the Reference Asset provided they hold sufficient number (as dictated by the terms of the issuance) in a single wallet; and
- may trade their Tokens on approved secondary markets operated by the Issuer, subject to liquidity and market conditions.

Tokenholders do not:

- have voting, governance, or control rights over The Issuer, or any related operations;
- have any entitlement to periodic interest or yield flows; or
- have any right to direct operational or strategic decisions.

3.7 Insolvency and Continuity Considerations

The Token structure is designed to clearly separate:

- The Issuer's role as issuer and platform operator;
- The Issuer's role as the owner of the Reference Asset, holding such Reference Asset on behalf of Tokenholders to protect their rights in the case of insolvency of the Issuer.

In the event of insolvency of the Issuer, the Reference Asset and associated economic rights remain structurally separate from the Issuer's insolvency estate in accordance with the provisions of section 9.3 and subject to applicable law, court proceedings, and the legal framework described in Appendix C.

Detailed insolvency, continuity, and risk considerations are set out in the Risk Disclosure Statement and the relevant appendices.

3.8 Events of Default and Remedies

Certain events may constitute a default affecting the operation or administration of the Token structure. These events include, but are not limited to:

- insolvency, liquidation, administration or similar proceedings affecting the Issuer;
- failure of the Issuer to maintain registration of the Reference Asset within the DMCC Tradeflow system;
- failure to maintain appropriate custody, storage, or insurance arrangements for the Underlying Asset;
- loss, damage, or destruction of the Underlying Asset where recovery or insurance proceeds are unavailable; or
- a material breach by the Issuer of its contractual obligations relating to the issuance, administration, or distribution mechanics of the Token.

Where reasonably practicable, the Issuer will take appropriate steps to protect the interests of Tokenholders. Such steps may include:

- exercising contractual governance or coordination rights in relation to the Reference Asset;
- appointing a replacement service provider, custodian, or operational agent where required;
- initiating the orderly liquidation of the Underlying Asset and distributing the proceeds to Tokenholders; or
- implementing contingency procedures consistent with the Issuer's regulatory wind-down and continuity arrangements.

Any recovery or distribution arising from such actions will be applied proportionally to Tokenholders in accordance with their respective Token holdings and the terms of the relevant issuance documentation.

4. REFERENCE ASSET FRAMEWORK

4.1 Overview of the Reference Asset

Each issuance of the Token references an individual defined Reference Asset.

The Reference Asset is not the Underlying Asset itself, but a DMCC Tradeflow Warrant which provides purchasers with demonstrable legal protection by creating a clear, enforceable security interest over the Underlying Asset held in DMCC-approved storage facilities. Each warrant is issued only after the goods have been independently verified, documented, and placed under the control of a licensed warehouse operator, who becomes legally responsible for safeguarding the inventory. The warrant serves as a title-linked instrument: it evidences the holder's legal right to the goods and ensures that the commodities cannot be moved, pledged, or released without the warrant holder's explicit authorisation.

The value of the Reference Asset is thus derived from ownership of these rights which entitle the Reference Asset holder, on a contractual basis, to liquidate the Underlying Asset and receive the proceeds from the liquidation.

Whilst title to the Reference Asset will remain, upon successful completion of the subscription process, with the Issuer at all times, Tokenholders have contractual ownership and are entitled to the full liquidation value (net of costs) of the Underlying Asset at the expiry of the Tokens.

4.2 Underlying Asset

The Underlying Asset to which the Reference Asset confers ownership is a 1,971kg pure silver bar minted in recognition of the 50-year anniversary of the UAE and holder of the Guinness World Record as the world's largest silver bar by weight.

4.3 Reference Asset Holding Structure

The underlying silver bullion referenced by the ARVA Tokens is represented by an electronic warehouse warrant issued through the TradeFlow system and held by Tokinvest DMCC.

Upon successful completion of the subscription process and transfer of the relevant warrant, Tokinvest DMCC will become the registered holder of the warehouse warrant and will hold the warrant and the associated silver bullion on trust for the benefit of ARVA Tokenholders pursuant to the Declaration of Trust described in this Whitepaper.

The Whitepaper sets out the basis on which the Issuer enters into contractual arrangements directly with Tokenholder in respect of the economic rights of ownership of each Reference Asset. These arrangements are issuance-specific and do not involve pooling or cross-collateralisation between issuances.

Enforcement of the contractual rights comprising the Reference Asset occurs, where applicable, at the structural level through Issuer exercising contractual governance and coordination rights in accordance with the issuance documentation.

4.4 Composition of the Reference Asset

Prior to issuance completion, the Reference Asset described in this Whitepaper represents the asset intended to be acquired by the Issuer upon successful completion of the subscription process.

Each issuance is launched with a defined Reference Asset composition, disclosed to investors prior to the opening of the Subscription Period.

This disclosure includes, as applicable:

- the composition of the referenced Underlying Asset;
- Warrant number, issue date, current status (active/suspended/expired), and any amendments/reissues;
- evidence that there are no liens, pledges, encumbrances, or third-party claims registered or contractually applicable (including warehouse liens for unpaid fees);
- any relevant serial numbers, quality certifications, purity details, custody provenance and other information pertinent to the Underlying Asset; and
- any material assumptions used in structuring the Reference Asset.

The Reference Asset composition for a given issuance is determined prior to launch and remains fixed at issuance and thereafter for the life of The Token.

4.5 Fixed Reference Asset per Issuance

For each issuance:

- the Reference Asset is fixed at issuance;
- no substitution, addition, or removal of Underlying Asset(s) occurs after issuance; and
- Tokenholders are exposed solely to the economic performance of the Reference Asset associated with that issuance.

Each issuance is uniquely identified and tracked through issuance-specific disclosures and smart contract metadata.

4.6 Governance and Step-In Rights

The Issuer retains contractual governance rights in respect of the Reference Asset.

These rights are intended to support continuity or value protection where reasonably practicable and do not constitute a guarantee of performance or recovery.

4.7 No Ownership, Security, or Control Rights

Ownership of Tokens does not confer:

- direct ownership or title to the Underlying Asset;
- voting or governance rights in relation to The Issuer; or
- control over custody or maintenance decisions

Economic participation is strictly contractual and limited to the price performance of the Underlying Asset as described in this whitepaper.

5. ECONOMIC MECHANICS OF DTFW TOKENS

5.1 Overview

Tokens are fixed-term, price-performance only digital instruments that provide Tokenholders with contractual economic participation in the purchase and eventual liquidation of an underlying commodity asset as described by the Reference Asset.

Each issuance of Tokens:

- has a fixed Economic Term;
- entitles Tokenholders to receive a final distributions of net liquidation proceeds at the completion of that Economic Term; and
- expires automatically at the end of the Economic Term with no residual value upon completion of said distribution.

Tokens do not represent direct ownership of Underlying Asset(s), do not provide periodic yield or other revenue payment, and do not entitle Tokenholders to any contractual rights beyond the Economic Term.

5.2 Source of Token Performance

The performance of The Token is directly determined by the economic value of the Underlying Asset to which the Reference Asset confers ownership rights. As The Token represents a digital embodiment of the warrant, its value and performance are intrinsically linked to the market value, condition, and realisable worth of the Underlying Asset recorded within the DMCC Tradeflow system. Any appreciation or depreciation in the underlying asset—whether driven by market prices, supply and demand dynamics, or asset-specific factors—will be reflected proportionately in the price of the token.

5.3 Distribution Mechanics

Token distributions, if any:

- take place only at the end of the Token Term when the Underlying Asset is liquidated by the Issuer;
- are paid in fiat currency (or stablecoins where permissible) to the Tokenholder's designated account on the Issuer's platform; and
- are allocated pro rata based on Token holdings as at the end of the Token Term.

Entitlement to the distribution depends solely on ownership of Tokens at the end of the Economic Term.

5.4 Redemption and Delivery of the Reference Asset

Where an investor acquires and holds 100% of all Tokens issued in respect of a Reference Asset in a single wallet they may, subject to the terms of the specific issuance, elect to take delivery of the Reference Asset. Upon completion of this process, the investor will cease to hold Tokens and will instead become the direct owner of the Reference Asset (and in turn the Underlying Asset), with the rights and obligations attaching to such ownership under the DMCC Tradeflow framework.

Following delivery of the Reference Asset, the Tokens corresponding to that issuance will be permanently cancelled or burned and will no longer represent any economic or proprietary interest. No further rights or claims shall subsist under the Tokens once the Reference Asset has been delivered to, and accepted by, the investor.

Process for Delivery

Upon receipt of a valid delivery request via the Issuer investor platform, the Issuer will verify the investor's ownership of all outstanding Tokens and confirm satisfaction of any applicable conditions, including identity verification, regulatory compliance, and settlement of any outstanding fees, costs, or charges associated with delivery.

Following verification, the Issuer will burn the Tokens and initiate the transfer of the Underlying Asset within the DMCC Tradeflow system in accordance with Tradeflow rules. From that point onward, the investor will be recognised as the legal holder of the Underlying Asset under the Tradeflow framework.

5.5 Expiry and End-of-Term Treatment

At a period of no less than two (2) months before the end of the Economic Term, the Issuer (acting as the registered warrant holder following successful issuance completion) will appoint an independent, DMCC-approved sale agent to oversee the liquidation process for the Underlying Asset described in the Tradeflow Warrant.

The liquidation and distribution process operates according to the following sequence:

1. Appointment of Sale Agent

An independent sale agent is appointed to oversee the sale process in accordance with applicable Tradeflow procedures.

2. Asset Realisation

The Underlying Asset described in the Tradeflow Warrant is sold at prevailing market rates through appropriate market channels.

3. Settlement of Transaction Costs

Any sale-related transaction costs associated with the liquidation of the Underlying Asset are settled.

4. Determination of Net Proceeds

The remaining proceeds following settlement of applicable transaction costs represent the net liquidation proceeds attributable to the Token issuance.

5. Distribution to Tokenholders

Net proceeds are credited to Tokenholders via the Tokinvest platform on a pro-rata basis according to Token holdings at the time of expiry.

6. Token Cancellation

Following completion of the distribution process, all Tokens associated with the issuance are permanently burned. No Tokens will remain in circulation and Tokenholders will have no further claims in respect of the issuance.

5.6 Use of Proceeds from Token Issuance

Proceeds from the issuance of the DTFW token, net of fees and commissions as detailed in this whitepaper, are used, upon successful completion of the subscription process, to acquire full legal title to the Reference Asset. Through this acquisition, the Issuer assumes ownership and, by extension, obtains the rights and economic interest in the Underlying Asset represented by the Reference Asset.

This mechanism ensures that token issuance is directly linked to the transfer of Reference Asset ownership.

Issuer Proceeds

Any profits realised by the Issuer from issuance-related activities (including brokerage, custody, management, and platform fees) are to be retained as part of its ordinary operating revenue.

These profits will be used to:

- Maintain and enhance the Issuer's trading and compliance infrastructure;
- Support ongoing regulatory and audit obligations under VARA;
- Fund research and development into tokenisation technology and secondary market integrations; and
- Strengthen their capital reserves in line with regulatory capital requirements for VARA-licensed entities.

No portion of issuance-related profits will be reinvested into the specific Reference Asset or distributed back to tokenholders:

5.7 Summary

In summary, Tokens provide:

- contractual ownership of the Reference Asset;
 - potential returns based on the market value of the Underlying Asset;
 - end of Economic Term distribution when the Underlying Asset is liquidated by the Issuer;
 - expiry at zero with no residual value after distributions have been made.
-

6. ISSUANCE, SUBSCRIPTION & TOKEN SUPPLY

6.1 Issuance Structure

Tokens are issued under a regulated, subscription-based issuance framework operated by the Issuer. Each issuance of Tokens is structured such that it:

- corresponds to a single, defined Reference Asset;
- is economically and contractually independent of all other issuances; and
- has its own fixed Economic Term, distribution profile, and Token supply.

Proceeds, Reference Assets, and Tokenholder rights are not pooled, aggregated, or cross-collateralised between issuances.

6.2 Issuance Identification

Each issuance is uniquely identified by:

- an issuance identifier embedded in the relevant smart contract metadata; and
- corresponding issuance-specific disclosure materials specifying the issuance date, issue size, Reference Asset composition, and distribution mechanics.

This identifier links each Token unambiguously to its associated Reference Asset and Economic Term.

6.3 Subscription Period

Tokens are offered solely through The Issuer's platform during a defined **Subscription Period**, during which:

- eligible investors may submit binding subscriptions; and
- investor funds are debited immediately from cleared balances and held in the Issuer's designated client money accounts.

Subscriptions submitted during the Subscription Period are binding for the purposes of determining issuance completion, subject to cancellation of the issuance as described in Section 6.7.

6.4 Minimum Token Subscription Threshold

Each issuance is launched with:

- a target size, which represents the total value of the Underlying Asset at subscription time; and
- a minimum subscription threshold,

both of which are disclosed in the applicable issuance documentation prior to the opening of the Subscription Period.

The minimum subscription threshold:

- may vary between issuances;
- reflects the minimum viable scale required to tokenise the Reference Asset; and
- must be satisfied before issuance can be completed.

Satisfaction of the minimum subscription threshold may require full subscription of the target size depending on issuance.

6.5 Investor Minimum Subscription Amount

The minimum subscription for this issuance is AED9,971. The Number of Tokens will be determined by reference to the final Token Price.

The Token will be listed in the currency in AED as the base currency of the UAE where the Issuer is domicile, or the standard quoted currency for the physical commodity represented by the Reference Asset, as decided by the Issuer

6.6 Determination of Final Issuance Size

Where the minimum subscription threshold is satisfied, the final size of the issuance is determined at the close of the Subscription Period based on the total subscriptions received, up to but not exceeding the target size.

If the minimum subscription threshold is also the full target size then the subscription is immediately closed when this threshold is met and investors will no longer be able to make additional purchases.

There is no oversubscription permitted in the issuance of the Token.

6.7 Unsuccessful Subscriptions

If the minimum subscription threshold is not met by the close of the Subscription Period, the issuance does not complete and no Tokens are minted.

In such circumstances, the Reference Asset is not transferred to the Issuer and the Token does not come into existence.

The Issuer may, subject to applicable regulatory requirements and updated disclosures, elect to:

- extend or reopen the Subscription Period; or
- defer the issuance to a later date on the same or revised terms.

Where an issuance does not complete, funds are returned to the investor's accounts on the Issuer's platform in full and without deduction and do not form part of the rights or characteristics of the Token.

The Issuer reserves the right, at its discretion and subject to applicable regulatory requirements, to withdraw, suspend, or cancel the issuance at any time prior to completion of the issuance and minting of the Tokens, including where operational, legal, regulatory, or market circumstances arise that may affect the feasibility or appropriateness of the issuance.

Where the issuance is withdrawn or cancelled prior to completion, no Tokens will be issued and any subscription funds received will be returned to investors in full through the Issuer's platform.

6.8 Token Price and Token Supply

Each Token is issued at a fixed Token Price based on the calculation below and the fees as set out in this whitepaper.

For each issuance the Token supply is fixed at issuance and cannot be increased thereafter. No additional Tokens may be issued in respect of an issuance once issuance has been completed other than to replace lost or stolen tokens.

Token Supply for the 1971kg Silver Bar

Each token will represent a 1g fraction of the bar. The total number of tokens issued will be **1.971mio**

Issue Price for the 1971kg Silver Bar

As the underlying commodity from which the bar was fabricated has a market reference price, the issue price will be calculated using the spot market price for silver plus a premium of 15% at 12pm UAE time on the closing day of the subscription period. The Issuer will use the live price from [XAG / USD Price Feed | Chainlink](#) as the spot market reference for silver pricing and this price will be displayed and update live on the investor platform throughout the subscription period.

The accepted market price for silver is denominated in USD per Troy Ounce. One Troy Ounce is 31.103477g and the price of each token will be calculated as;

$$\text{Token Price} = \frac{(\text{Spot Silver Price} * 1.15)}{31.103477}$$

at the time mentioned above. The Issuer will provide all investors with details of the final issue price upon successful subscription

Collectible Premium Determination

The initial issuance price for the DTFW Token incorporates a collectible premium above the prevailing commodity value of the underlying silver content.

This premium reflects the collectible and historical attributes of the underlying asset and is determined prior to the opening of the Subscription Period by the Issuer based on relevant market information, which may include market comparables, specialist market input, and valuation references relating to the collectible characteristics of the asset.

The premium applicable to each issuance is disclosed in the relevant issuance documentation prior to the opening of the Subscription Period and remains fixed throughout the Subscription Period.

The Issuer is responsible for determining and approving the premium applied to the issuance price in accordance with its internal governance and conflict management framework.

Following completion of the issuance, secondary market pricing of the Token is determined solely by market supply and demand and may differ materially from the initial issuance price or any reference commodity price.

6.9 Issuance Completion

Issuance completion refers to the point at which the Token comes into existence on-chain and attaches to the Reference Asset.

Issuance is completed following:

- closure of the Subscription Period;
- confirmation that the minimum subscription threshold has been satisfied; and
- completion of all applicable compliance, custody, and reconciliation checks.

Upon completion of issuance:

- Tokens are minted; and
- Tokens are credited to investors' verified wallets within two (2) Business Days.

Token minting occurs only after confirmation that the Tradeflow warrant representing the Reference Asset has been transferred or registered to Tokinvest DMCC as warrant holder within the Tradeflow registry.

6.10 Eligibility and Participation Requirements

To participate in an issuance, investors must:

- be at least 18 years of age;
- successfully complete the Issuer's AML/KYC onboarding process;
- be approved as whitelisted participants; and
- comply with all applicable jurisdictional, regulatory, and sanctions-related restrictions.

The DTFW Token is not available to residents or citizens of the United States of America or to persons located in sanctioned jurisdictions or jurisdictions identified by the Financial Action Task Force (FATF) as high-risk jurisdictions.

Participation may be further restricted for certain jurisdictions in accordance with applicable laws or the Issuer's internal compliance policies.

The DTFW Token may be made available to eligible investors across retail, professional, and institutional categories, subject to the Issuer's onboarding and appropriateness assessment procedures.

Prior to participating in an issuance, investors are required to complete the Issuer's onboarding process, which includes identity verification, jurisdictional eligibility checks, and an appropriateness assessment designed to evaluate the investor's understanding of the risks associated with Virtual Assets and tokenised real-world assets.

Investors must also acknowledge the principal risk disclosures associated with the Token issuance, including risks relating to valuation uncertainty, liquidity constraints, and the collectible characteristics of the underlying asset.

Where the Issuer determines that participation may not be appropriate for a particular investor based on the results of the appropriateness assessment, additional risk acknowledgement steps may be required or access to the product may be restricted in accordance with the Issuer's regulatory obligations.

6.11 Oversubscription and Adjustment of Issuance Size

Each issuance will be launched with the target size disclosed in advance, based on the value of the Underlying Asset held by the Reference Asset.

Oversubscription is not possible for the Token. When the target size has been met and further subscriptions cannot be accommodated all excess funds are returned to investors without deduction.

6.12 Fees & Charges

All fees and charges are payable in addition to the Token Price unless otherwise specified.

The following table summarises the fees that may apply in connection with the subscription, holding, transfer, and administration of DTFW Tokens.

FEE TYPE	BASIS	PAYER	RECIPIENT	TIMING	DEDUCTED FROM INVESTOR SUBSCRIPTION PROCEEDS?
----------	-------	-------	-----------	--------	---

Primary Issuance Brokerage Fee	2% of Token purchase amount	Investor	Issuer	At subscription	No
Asset Custody and Insurance Fee	Prepaid custody, storage and insurance arrangement covering the Economic Term of the issuance – see section 6.12 below of this Whitepaper for details.	Investor	Custodian (Brinks)	At issuance	Yes
Legal Fees directly related to token issuance	One-off payment of USD10k for pre-issuance legal opinion	Payable by Issuer but funded from issuance proceeds	External Legal Counsel	At issuance	Yes
Secondary Market Transfer Fee (OTC)	0.25% of transaction value	Buyer and Seller	Issuer	At transaction execution	No
Virtual Asset Transfer Fee	0.1% of transferred amount	Token recipient	Issuer	At token transfer	Yes
Token Management Fee	0.1% lifetime management fee calculated daily	Tokenholder	Issuer	Billed monthly	No
Token Custody Fee	0.2% per annum calculated daily	Tokenholder	Issuer	Billed monthly	No

Custody, storage and insurance costs relating to the underlying asset are arranged by the Issuer for the duration of the Economic Term. These costs are reflected in the Purchase Price up front for the term of the asset and collected at the time of issuance. They and are not charged to Tokenholders as ongoing asset-level operating expenses. The applicable custody, storage and operational handling fees are governed by the Brinks Global Services Storage Contract and related custody framework and these custody fees are confirmed as follows:-

Silver Bar ARVA Lifetime Storage Including Liability = USD 1,850.00 + VAT per month, with 5% Increment every year.

Fees relating to the operation of the token platform and digital asset infrastructure are separate from costs associated with maintaining the underlying physical asset.

Other than set out above, no additional fees are charged directly to Tokenholders by the DMCC Tradeflow registry or the physical custodian of the underlying asset.

6.13 Cashflow Waterfall and Fee Treatment

The financial flows associated with a Token issuance operate as follows:

1. Subscription Phase - Investor subscription funds are received and held within the Issuer's designated client money accounts pending completion of the issuance and reconciliation checks.
2. Reference Asset Acquisition - Upon successful completion of the subscription and reconciliation process, subscription proceeds (net of the Primary Issuance Brokerage Fee described above) are applied to acquire the Reference Asset associated with the issuance.
3. Asset-Level Costs - Custody, storage, and insurance arrangements relating to the Underlying Asset are arranged by the Issuer for the duration of the Economic Term.
These asset-level costs are set out in this whitepaper and payable by Tokenholders as part of the issuance structure and reflected in the overall pricing of the issuance.
4. Platform and Token Administration Fees - Certain fees relating to the operation of the Issuer platform, token administration, custody of digital assets, or secondary-market transactions may apply as disclosed in Section 6.12.
These fees relate to the operation of the tokenisation platform and digital asset infrastructure and are separate from costs associated with maintaining the physical asset.
Platform-related fees are charged at the token or platform level and are not deducted from proceeds distributed to Tokenholders following liquidation of the Underlying Asset.
5. End-of-Term Distribution - At the conclusion of the Economic Term, the Underlying Asset is sold and the net proceeds of sale are distributed proportionally to Tokenholders in accordance with their respective Token holdings.

6.14 Summary

In summary, each issuance:

- is conducted through a defined Subscription Period;
- proceeds only if a disclosed minimum subscription threshold is met;
- results in a fixed Token supply issued at a fixed initial Token Price; and
- remains economically and contractually independent from all other issuances.

7. VA TRADING PLATFORM, SECONDARY MARKET TRADING & PRICING

7.1 Token Trading Platform

The Issuer is the licensed issuer and distributor of DTFW tokens through their investor platform.

- The DTFW token is listed and can be traded on the Issuer investor platform or other appropriately regulated platforms.
- The CAP table denoting token ownership is maintained internally by the Issuer.

- Where an investor chooses to leave their Virtual Asset for custody on the Issuer platform, there are no additional technical requirements to own or hold DTFW tokens beyond use of said platform.
- Token custody may remain with the Issuer, be transferred to another regulated custodian or VASP providing incidental custodian services or be self-custodied by the investor.
- Whilst under the custodial oversight of the Issuer DTFW tokens are custodied with Hex Trust, a VARA-regulated custodian.

Eligible whitelisted investors must credit their account with the Issuer with fiat currency (or stablecoins where permissible) ahead of purchasing the token. The investor's total balance must be more than the minimum purchase amount plus fees and any expected foreign exchange costs if relevant.

7.2 Custody Model, Self-Custody and Transfer Controls

DTFW Tokens may be held in custody on the Issuer platform, transferred to another regulated custodian or VASP providing incidental custody services, or withdrawn to an external wallet under the control of the investor (self-custody).

Where Tokens are held under the custodial oversight of the Issuer, custody is provided through Hex Trust or other authorised custody infrastructure providers.

Tokenholders may request withdrawal of Tokens to external wallets subject to compliance and operational checks performed by the Issuer. Such checks may include verification of wallet ownership, confirmation that the receiving wallet supports the relevant token standard, and compliance screening in accordance with applicable regulatory obligations.

Transfers of Tokens remain subject to transfer restrictions embedded within the token smart contract and the operational policies of the Issuer. These controls may include wallet whitelisting requirements and other compliance checks designed to ensure that transfers occur only between approved participants.

Token minting permissions remain under the control of the Issuer. Custody providers, wallet providers, or other third parties do not have authority to mint additional Tokens or alter the Token supply.

Handling of Transfers to Non-Approved Wallets

Where a Tokenholder attempts to transfer Tokens to a wallet address that has not been approved or whitelisted within the Issuer's compliance framework, the transaction will not be executed. Transfer restrictions embedded within the ERC-1404 token logic require the receiving wallet to be authorised prior to the transfer being processed.

Accordingly, Tokens cannot be transferred to wallet addresses that are not associated with verified and approved participants. Any attempted transfer to a non-approved wallet will fail at the smart contract level and the Tokens will remain in the originating wallet.

Where Tokens have been withdrawn to self-hosted wallets, subsequent transfers remain subject to the same transfer-restriction controls and may only be completed where the receiving wallet has been approved in accordance with the Issuer's onboarding and compliance requirements.

7.3 Client Asset Segregation and Reconciliation

Client Virtual Assets and fiat balances associated with DTFW Tokens are segregated and reconciled in accordance with the Issuer's client asset protection framework approved by VARA.

Client asset records are maintained across three primary record sets:

- internal cap table and client account records maintained by the Issuer;
- on-chain token balances recorded on the relevant blockchain; and
- custody records maintained by the Issuer's custody infrastructure providers.

Reconciliation procedures are performed on a regular basis to verify consistency across these records. These procedures include automated and manual reconciliation checks designed to ensure that client account balances, on-chain token balances, and custody records remain aligned.

Where discrepancies are identified through reconciliation processes, they are escalated through the Issuer's operational control framework and investigated in accordance with the Issuer's established incident and exception management procedures.

Oversight of reconciliation controls forms part of the Issuer's internal governance and compliance framework, including review by relevant operational and compliance functions.

These reconciliation procedures apply consistently across all Virtual Asset products issued or distributed through the Issuer platform, including asset-referenced virtual asset (ARVA) issuances such as the DTFW Token.

7.4 Token Administration Powers and Governance

The Issuer maintains administrative control over the token smart contract infrastructure used for the issuance and management of DTFW Tokens.

Administrative powers may include the ability to mint, burn, freeze, or reissue Tokens in limited circumstances where required to maintain the integrity of the token infrastructure or to comply with legal or regulatory obligations.

Such administrative actions may occur only under defined circumstances including, but not limited to:

- execution of the end-of-term liquidation process described in Section 5;
- compliance with valid court orders or regulatory instructions;
- recovery actions in relation to fraud, theft, or operational errors affecting token balances; or
- resolution of technical incidents affecting the smart contract or token infrastructure.

Governance approval for any such administrative action is subject to internal controls of the Issuer and is formally documented prior to execution.

All administrative actions affecting token balances are recorded within the Issuer's operational systems and are subject to audit logging and internal governance oversight.

Where administrative action affects a tokenholder's balance, the Issuer will notify affected tokenholders where legally permissible and in accordance with applicable legal or regulatory requirements.

Administrative Role Permissions

The following table summarises the principal administrative permissions associated with the token smart contract infrastructure used for DTFW Tokens.

Function	Control Entity	Description
Mint Tokens	Issuer (Tokinvest)	Used only at issuance completion to create the fixed Token supply for the issuance.
Burn Tokens	Issuer (Tokinvest)	Used during end-of-term liquidation or in limited circumstances described in this whitepaper.
Freeze / Pause	Issuer (Tokinvest)	Used where required to comply with legal or regulatory obligations or to respond to technical incidents affecting the token infrastructure.
Whitelist Administration	Issuer (Tokinvest)	Used to enforce transfer restrictions and ensure Tokens may only be held or transferred by approved participants.
Transfer Administration	Issuer (Tokinvest)	Used to administer transfers within the compliance framework of the platform.
Oracle Administration	N/A	The ERC-1404 contract architecture used for DTFW Tokens does not rely on an on-chain oracle for smart contract execution or token functionality.

Administrative controls are executed through the Issuer's controlled wallet infrastructure and are subject to internal governance procedures and audit logging.

Administrative Key Custody and Governance

Administrative control of the token smart contract infrastructure is exercised through a dedicated administrative wallet under the control of the Issuer.

The private keys associated with this wallet are secured through the Issuer's custody arrangements with Hex Trust, which utilises hardware security module (HSM) infrastructure for key protection.

Access to administrative functions is governed by the Issuer's internal control framework, including segregation of duties, role-based access controls, and periodic access reviews in accordance with the Issuer's operational policies.

Administrative actions affecting the token infrastructure are subject to internal governance approval and audit logging within the Issuer's operational systems.

7.5 Smart Contract Infrastructure and Deployment

DTFW Tokens are issued using a standardised ERC-1404 compliant smart contract architecture implemented as a BEP-20 compatible token on BNB Smart Chain. The ERC-1404 framework provides transfer-restriction functionality designed to support regulatory and compliance requirements applicable to tokenised assets.

The smart contract implementation used for DTFW Tokens is not upgradeable once deployed. The deployed contract code remains immutable and cannot be modified or replaced after deployment.

The ERC-1404 smart contract implementation used for DTFW Tokens has previously undergone independent security review. The Issuer confirms that the contract deployed for this issuance will be compiled from the same audited source code using the same compiler configuration.

No modifications to the audited contract logic have been made since the completion of the audit. The bytecode of the deployed contract will correspond to the compiled output of the audited source code and will be publicly verifiable through the relevant blockchain explorer.

Administrative permissions described in Section 7.4 allow the Issuer to perform certain operational actions (such as minting, burning, freezing or whitelisting Tokens) within the logic of the deployed contract, but do not allow modification of the underlying smart contract code.

The smart contract framework used for DTFW Tokens is based on the same audited contract architecture used for prior token issuances by the Issuer.

The specific smart contract for each issuance is deployed only after successful completion of the subscription process described in Section 6.9.

The contract deployed for each issuance is compiled from the same codebase and configuration as the audited contract template used by the Issuer. No modifications to the audited contract logic are made for individual issuances other than parameters relating to the specific issuance (such as token name, symbol and supply).

The smart contract source code, compilation details and verification status for previously deployed contracts are publicly available on-chain and may be reviewed via the relevant blockchain explorer.

Smart contracts deployed for each issuance will be verified on the relevant blockchain explorer, enabling public inspection of the source code and confirmation that the deployed bytecode corresponds to the verified contract implementation used by the Issuer.

7.6 Secondary Market Availability

Following completion of issuance, Tokens may be admitted to secondary-market trading on platforms operated by the Issuer and, where applicable, on other VARA-licensed venues approved by the Issuer.

Secondary-market availability is subject to market conditions, participant demand, and ongoing compliance requirements. The Issuer does not guarantee liquidity, continuous trading, or the ability to buy or sell Tokens at any time or at any particular price.

All secondary-market transactions are conducted in accordance with the Issuer's market conduct rules, surveillance arrangements, and compliance controls.

Market Conduct and Trading Controls

Secondary market trading of DTFW Tokens on the Issuer platform is subject to the Issuer's market conduct and surveillance framework designed to support fair and orderly markets.

The Issuer monitors trading activity on its platform using automated and manual surveillance processes intended to identify potentially abusive or manipulative behaviour, including but not limited to wash trading, spoofing, or other forms of market manipulation.

The Issuer may implement temporary trading restrictions or suspensions in circumstances where trading activity appears disorderly or where operational or market disruptions occur.

Such circumstances may include:

- material system disruptions affecting the trading platform;
- market conditions that prevent reliable price discovery;
- suspected market abuse or manipulation; or
- other circumstances where the Issuer considers temporary intervention necessary to maintain orderly trading.

Where trading restrictions or suspensions are implemented, the Issuer will communicate such actions to affected participants through the platform and other appropriate communication channels.

Secondary market prices remain determined by market supply and demand between participants and may differ materially from any reference commodity price or indicative valuation of the underlying asset.

Market Disruptions and Pricing Continuity

In circumstances where trading is suspended due to operational disruptions, market disorder, or other exceptional conditions, secondary-market trading will be temporarily halted until normal market conditions resume.

During any such suspension, the Issuer does not establish substitute prices for secondary-market trading. Once trading resumes, prices will continue to be determined by market supply and demand among participants.

Where relevant operational updates are required, the Issuer will communicate such information to platform participants through the investor platform and other appropriate communication channels.

7.7 Pricing Model

Tokens do not entitle holders to periodic revenue distributions. Accordingly, Tokens are expected to trade on a price driven basis with respect to the Reference Asset, meaning that:

- Prices on secondary markets are determined solely by supply and demand among market participants and may differ materially from any indicative valuation, appraisal, or reference commodity price of the Underlying Asset.
- Non-market considerations such as collectibility or rarity of the Underlying Asset may add a premium or discount to any base commodity market price element; and
- This premium or discount may persist over time and may not converge toward any commodity spot price or indicative valuation.

Secondary-market prices are therefore driven by investor demand and should therefore be understood as market-clearing prices for the Reference Asset at a given time, inclusive of any collectible or non-commodity attributes.

7.8 No Yield, Return, or Pricing Guarantees

Tokens do not provide yields or offer guaranteed returns, or exit prices, and secondary-market outcomes depend entirely on market conditions and investor supply and demand.

7.9 Trading as Principal (Settlement Facilitation Only)

In limited circumstances, the Issuer may temporarily act as principal solely to facilitate settlement where two client orders are matched on compatible terms.

In such circumstances:

- the Issuer does not take directional, speculative, or inventory positions;
- both counterparties receive execution at identical prices and on identical terms; and
- the Issuer does not derive any incremental economic benefit beyond its disclosed fees.

This activity is operational in nature, subject to internal compliance oversight and post-trade review, and is intended solely to support orderly settlement.

The Issuer does **not** provide market-making services.

8. STRUCTURAL LIMITATIONS AND GOVERNANCE MECHANISMS

This Section describes certain structural limitations inherent to the Token and the governance mechanisms intended to support orderly operation of the issuance.

Detailed discussion of investment risks is set out separately in the Risk Disclosure Statement, which must be read together with this whitepaper.

8.1 Fixed-Term, Price-Only Structure

Each Token provides a contractual, time-limited right to proceeds of sale (if any) generated by liquidating the Underlying Asset described in the Reference Asset at the end of the Economic Term only.

Tokens do not provide yield or other income distribution, or entitlement to residual value and expire automatically at the end of the Economic Term when the proceeds of sale have been distributed.

8.2 Ownership of the Reference Asset

Tokens confer fractional ownership of only:

- the Reference Asset

8.3 Secondary Market Limitations

Tokens may be admitted to secondary-market trading, subject to market conditions and compliance requirements.

Liquidity is not guaranteed, and secondary-market availability does not alter the fixed-term, price performance nature of the Token.

9. LEGAL STRUCTURE & INVESTOR PROTECTIONS

9.1 Legal Nature of the Token

Each Token represents a tokenised interest in the Reference Asset and is issued by the Issuer under its VARA-licensed framework. Legal title to the warrant is retained by the Issuer; however, pursuant to the terms of the applicable token issuance and custodial agreements, each Token conveys to the Tokenholder beneficial ownership of the Reference Asset and all associated economic rights. Tokens:

- confer beneficial ownership of a specific, identifiable Reference Asset;
- provide the Tokenholder with the economic rights arising from ownership of the Underlying Asset represented by that Reference Asset;
- do not constitute equity or debt interests in The Issuer, other than The Issuer's role as legal titleholder, custodian, and administrator of the tokenisation framework; and
- do not grant Tokenholders any rights beyond those expressly set out in this whitepaper and the applicable contractual documentation.

Tokenholders' rights arise from the beneficial ownership of the Reference Asset and are enforceable exclusively pursuant to the contractual arrangements governing the issuance, custody, and transfer of the Tokens.

9.2 Structural Separation of Assets and Rights

The Reference Asset associated with each issuance consists of contractual rights of ownership of the Underlying Asset and is held by the Issuer.

- The Reference Asset is the legal instrument warrant that evidences and governs ownership of, or entitlement to, the Underlying Asset under the DMCC Tradeflow system;
- The Issuer holds legal title to the warrant;
- Tokenholders hold beneficial ownership of the Reference Asset; and
- Any rights to the Underlying Asset (delivery, transfer, disposal) are exercisable only through the Reference Asset and in accordance with its terms and the applicable Tradeflow rules.

9.3 Investor Rights, Enforceability and Legal Recourse in the event of Issuer Insolvency

Trust Structure and Nature of Rights

The Reference Asset and the associated Underlying Asset are held by the Issuer on trust for the benefit of Tokenholders pursuant to a Declaration of Trust governed by the laws of the Dubai International Financial Centre ("DIFC") (the "**Trust Deed**").

Under the Trust Deed, each Tokenholder holds a direct, undivided and proportionate beneficial interest in the Trust Property, corresponding to their respective Token holdings.

Such interest constitutes a proprietary beneficial interest under DIFC law, separate from and not limited to any contractual claim against the Issuer.

Jurisdiction and governing law

Contractual rights of Tokenholders against the Issuer (including those arising under this whitepaper and related documentation) are governed by DIFC law and may be enforced through the courts of the Dubai International Financial Centre (DIFC), save where mandatory law requires otherwise.

Claims against the Issuer

Tokenholders may bring claims directly against the Issuer in respect of any breach of the Issuer's contractual obligations under this whitepaper or the applicable issuance documentation. Such obligations include, without limitation, the proper issuance and administration of Tokens, maintenance of records, operation of the distribution and secondary-market framework, and exercise of contractual governance and step-in rights where applicable.

Capacity of the Issuer as Trustee

The Issuer holds legal title to the Reference Asset solely in its capacity as trustee and not for its own account.

The Issuer has no beneficial, economic or proprietary interest in the Trust Property and holds such property exclusively for the benefit of Tokenholders in accordance with the Trust Deed.

Beneficial Ownership and Fractional Entitlement

Each Token represents a direct, undivided and proportionate beneficial interest in the Trust Property. Such interest attaches solely to the Trust Property associated with the relevant issuance and does not extend to the general assets of the Issuer.

The beneficial interests of Tokenholders are proprietary in nature and are intended to rank ahead of unsecured creditor claims of the Issuer in respect of the Trust Property.

Asset Segregation and Ring-Fencing

The Trust Property is required to be:

- (a) held separately from the Issuer's own assets;
- (b) clearly identified as trust property in the Issuer's books and records; and
- (c) segregated from assets relating to any other issuance.

The Trust Property is not available to satisfy claims of the Issuer's creditors, except to the extent required under applicable insolvency or enforcement law.

Insolvency and Creditor Protection

The Trust Property is intended to constitute trust property for the purposes of DIFC Trust Law and to be legally and beneficially segregated from the Issuer's own assets.

In the event of an insolvency, liquidation, administration or similar proceeding affecting the Issuer:

- (a) the Trust Property is intended not to form part of the Issuer's insolvency estate;
- (b) any insolvency office-holder is required to hold the Trust Property subject to the trust constituted by the Trust Deed; and
- (c) the Trust Property is intended to be preserved, protected and transferred for the benefit of Tokenholders.

Tokenholders (acting collectively in accordance with the Trust Deed) have the right to appoint a replacement trustee, custodian or nominee and to procure the transfer of the Trust Property to such replacement entity.

This section summarises the intended legal structure of the Token and the Trust Property. It is not a legal opinion.

While the Trust Deed is designed to create a valid and enforceable trust under DIFC law and to achieve segregation of the Trust Property, the treatment of such arrangements in insolvency or enforcement scenarios may be subject to applicable law, judicial interpretation and the specific facts at the relevant time.

Enforceability and Jurisdiction

The Trust Deed is governed by DIFC law and provides for the exclusive jurisdiction of the DIFC Courts. The Issuer has agreed that any judgment of the DIFC Courts in respect of the Trust Property shall be binding and enforceable, including in the courts of the United Arab Emirates, subject to applicable enforcement procedures.

Insolvency Acknowledgment and Directions to Insolvency Officer

The Issuer acknowledges and agrees that any insolvency officer, liquidator, administrator or similar official appointed in respect of The Issuer shall hold the Reference Asset subject to the rights of the Tokenholders and shall have no authority to deal with the Reference Asset other than for the purpose of transferring or preserving it for the benefit of the Tokenholders.

No Security Interest or Set-Off

The Issuer shall not grant, and confirms that it has not granted, any security interest, lien, pledge or other encumbrance over the Reference Asset.

The Issuer waives any right of set-off, retention or counterclaim against the Reference Asset in respect of any obligation owed to The Issuer by any Tokenholder.

Substitution and Continuity Mechanism

Upon the occurrence of an Insolvency Event in respect of The Issuer, the Tokenholders (acting by a majority in value) shall be entitled to appoint a replacement custodian or nominee, and The Issuer or any insolvency officer shall promptly transfer the Reference Asset to such replacement custodian.

Wind Down Plan

The Wind Down Plan was approved by VARA as part of The Issuer's licensing approval. The plan outlines all the activities and processes that the business will undertake should it become insolvent. A critical aspect of the plan is to ensure that client assets are at all times protected and secured within named "client accounts" which will constitute a one of two options depending on if fiat or digital assets are being custodied:

- Fiat currency (cash) will, at all times, be securely stored with an approved third-party bank within the UAE. The Issuer utilises Client Money Account(s) with Zand Bank.
- Digital assets, where possible, are securely stored with a VARA licensed third-party custodian within the UAE. The Issuer utilises Hex Trust MENA.

The purpose of client assets being held within accounts designated "client accounts", is to ringfence client assets from company assets in the case of an insolvency.

Tokenholders will be able to engage with the appointed insolvency practitioners during the insolvency proceedings to recover their assets and have them transferred to a third-party location. The appointed insolvency practitioner will ensure that tokenholders are kept fully abreast of the situation and detail to the tokenholders what they need to do, and provide, in order to recover their assets.

Exercise of rights in practice

In practice, Tokenholder rights are exercised collectively and structurally through the Issuer's regulated framework. Where issues arise affecting the Reference Asset or the contractual economic rights underlying an issuance, the Issuer may exercise contractual governance, enforcement with the objective of protecting Tokenholder interests to the extent reasonably practicable. Tokenholders do not take individual enforcement action at the asset or operational level.

9.4 Variation of Rights

The rights of tokenholders may not be varied except in accordance with the provisions of this whitepaper and applicable law.

- No variation may be made unilaterally by the Issuer.
- Any proposed variation must be subject to regulatory approval (where required) and communicated transparently to all tokenholders.
- Tokenholders retain the right to reject any variation that materially affects their contractual entitlements.

9.5 Issuer Role and Governance Rights

The Issuer acts as:

- the regulated issuer of the Tokens;
- holder of the legal title to the Reference Asset; and
- the operator of the primary issuance and approved secondary-market platforms under the VARA framework.

The Issuer retains limited contractual governance, oversight, and coordination rights intended solely to protect the integrity of the issuance and facilitate orderly outcomes where reasonably practicable.

9.6 Investor Suitability, Appropriateness and Sales Conduct

Participation in Token issuances is limited to investors who have completed the Issuer's onboarding, AML/KYC, and jurisdictional eligibility checks in accordance with applicable VARA requirements;

- the DTFW Token is not available to residents or citizens of the United States of America or to persons located in sanctioned jurisdictions or jurisdictions identified by the Financial Action Task Force (FATF) as high-risk jurisdictions
- Eligibility and appropriateness assessments applicable to participation in token issuances are described in Section 6.10.
- investors using unverified or non-whitelisted wallets are not eligible to hold or transfer tokens.

The Issuer applies a range of controls to ensure compliance with jurisdictional restrictions and regulatory obligations. These controls include identity verification and residency checks as part of the onboarding process, sanctions screening against applicable international sanctions lists, and the requirement that Tokens may only be held or transferred through verified and whitelisted wallets.

The Issuer may also apply additional monitoring and controls to identify potentially restricted participants or prohibited jurisdictions, including review of account activity and other compliance monitoring procedures in accordance with applicable regulatory requirements.

Where the Issuer identifies activity that may be inconsistent with applicable jurisdictional restrictions or sanctions obligations, the Issuer may restrict participation, suspend accounts, or take other compliance actions as required.

Tokens are structured as fixed-term, price performance instruments and are intended to be accessible to retail investors. The Issuer does not provide investment advice, portfolio management, or personalised suitability assessments. Investors are responsible for determining whether participation is appropriate for their individual circumstances.

To support fair treatment of investors and mitigate mis-selling risk, the Issuer maintains controls including:

- clear, plain-language disclosures describing the Token's structure, limitations, and economic profile;
- explicit presentation of key risks and the absence of capital protection or guaranteed returns;
- restrictions on marketing or communications that imply guaranteed yield, or capital preservation;
- internal review and approval of product disclosures and promotional materials; and
- controls over sales practices in accordance with VARA financial promotion standards.

Disclosures are designed to be comprehensible to investors without specialist technical or virtual asset expertise. The Issuer may impose additional acknowledgements, warnings, or participation restrictions where required by applicable regulation or jurisdictional considerations.

9.7 Investor Ranking and Claims

Tokenholders:

- have no claim against the general assets of the Issuer; and
- have no claim against the Issuer beyond its contractual obligations as issuer and platform operator.

Any recovery of economic value must occur through:

- distributions upon sale at the conclusion of the Economic Term; and/or
- secondary-market token sales prior to expiry.

Tokenholders are not direct parties to the contractual arrangements comprising the Reference Asset and have no direct enforcement rights against the Issuer other than as expressly set out in this whitepaper.

9.8 Material Legal Considerations

The DTFW tokens have been designed to be a VA product that is suitable for all investor categories including retail investors.

All investors must pass KYC/AML checks and comply with platform terms. Transfer of these Virtual Assets can only be made via the Tokinvest OTC platform to pre-authorised and screened investors. Investors outside of the UAE are responsible for ensuring compliance with their local laws regarding virtual assets. Ownership and transaction of these Virtual Assets is not available to citizens or residents of the USA, UK or any sanctioned or FATF high risk jurisdiction.

Note that changes in laws or regulations may affect token legality, transferability, or value. A comprehensive risk disclosure document accompanies this whitepaper, detailing all potential risks associated with ownership.

Each investor / owner of these Virtual Assets agrees to the following:-

1. This Whitepaper together with the Tokinvest Brokerage Terms and Conditions and the associated Risk and Disclosure statement sets out the basis upon which the investors agree to acquire and trade this Virtual Asset.
2. Notwithstanding the following or any other provision of this white paper, in its capacity as the Issuer Tokinvest DMCC does not limit or exclude its actual or potential civil liability in respect of the accuracy of any information in this whitepaper, or any other disclosure or communication relating to this whitepaper. Subject to the foregoing:
 - a) the Issuer shall not be liable to you for any indirect or consequential losses or for any loss or profits or anticipated returns;
 - b) the total aggregate liability of the Issuer to you in contract, tort, negligence, for breach of statutory duty, under an indemnity or otherwise arising out of or in connection with the issuance of this virtual asset will be capped at a sum equal to the amount of payments that have been received by Tokinvest for distribution to tokenholders and which are due to you in accordance with the terms of this Virtual Asset whitepaper.

3. The Issuer will not be liable in contract, tort (including negligence), for breach of statutory duty, under an indemnity or in any other way for any special or indirect or consequential loss or damage suffered or incurred by you arising out of or in connection with the issuance of this Virtual Asset.
4. Nothing contained in this section shall be applicable to the extent that it: a) constitutes a limitation or exclusion of liability for death or personal injury caused by negligence or constitutes a limitation or exclusion of liability for fraud, deceit, or reckless disregard of professional obligations; or b) would render either you or us in breach of any applicable and mandatory legal, regulatory or other professional restriction or requirement.
5. Unless otherwise specified in this whitepaper, the rights of an investor / owner of this Virtual Asset cannot be changed or varied without the approval of the investor / owner of the Virtual Asset.
6. Any complaints arising out of, or in connection with, this whitepaper or token should be should be directed to the published Tokinvest Complaints Handling and Resolution Procedure on the company website.
7. Unlike Crypto tokens which are themselves the underlying asset, RWA tokens are on-chain representations of off-chain assets or their associated economic benefits. This means that if RWA tokens are lost or compromised, they can be burnt and re-issued to the rightful owner as registered on the Tokinvest CAP table. As such, should a recovery event occur, the Issuer will burn those tokens identified as compromised and replace them with new, valid tokens on a one-for-one basis directly into the wallet of the rightful owner(s).

9.9 Complaints Handling

Tokinvest DMCC maintains a formal complaints handling procedure in accordance with the requirements of the Dubai Virtual Assets Regulatory Authority (VARA).

Investors may submit complaints relating to the issuance, administration, or trading of the DTFW Token by contacting Tokinvest through the complaints process described on the Tokinvest website. Upon receipt of a complaint, Tokinvest will acknowledge the complaint and review it in accordance with its internal complaints handling procedures. Complaints will be assessed and responded to within a reasonable timeframe in accordance with applicable regulatory requirements.

Further details regarding the complaints submission process, including contact details and escalation procedures, are available in the [Tokinvest Complaints Handling and Resolution Procedure published on the Tokinvest website](#).

9.10 Relationship to Appendices

Further detail on the following is provided in the appendices to this whitepaper:

- Issuer governance and regulatory status;
- related parties, roles and responsibilities;
- custody, settlement, and flow of funds; and
- additional regulatory disclosures and definitions
- supplementary documentation related to the Reference Asset

The appendices form an integral part of this disclosure but are not intended to replace the core product description set out in Sections 1–9.

9.11 Product Wind-Down and Contingency Procedures

The Issuer maintains procedures designed to facilitate the orderly wind-down of the DTFW Token issuance should circumstances arise requiring termination or liquidation prior to the scheduled expiry of the Economic Term.

Potential triggers for product wind-down may include:

- insolvency, liquidation, or regulatory intervention affecting the Issuer;
- inability to maintain custody, storage, or insurance arrangements for the Underlying Asset;
- loss, damage, or destruction of the Underlying Asset where recovery or insurance proceeds are unavailable;
- material failure of technology infrastructure required to administer the Token; or
- regulatory direction requiring suspension or termination of the product.

Operational wind-down steps may include:

1. suspension of new subscriptions and secondary-market trading where appropriate;
2. verification and reconciliation of Tokenholder records and on-chain balances;
3. appointment of an independent sale agent or administrator where required;
4. liquidation of the Underlying Asset in accordance with applicable Tradeflow procedures and market conditions;
5. distribution of net proceeds to Tokenholders proportionally to their respective Token holdings; and
6. burning of outstanding Tokens following completion of distributions.

Technology contingency

If the Issuer platform becomes unavailable, Tokenholder balances may be determined through the blockchain record and internal issuance records. Distribution and settlement processes may be administered through alternative operational arrangements, including the appointment of third-party administrators where required.

Communication

Tokenholders will be notified through the Issuer platform, registered contact channels, and other appropriate communication methods regarding any wind-down event and the expected process for asset liquidation and distribution.

APPENDIX A

TOKINVEST OVERVIEW, GOVERNANCE AND REGULATORY STATUS

A.1 Issuer

Tokinvest DMCC is a company duly incorporated under the laws of the United Arab Emirates, with its registered address at Unit No: UT-12-PO-8, DMCC Business Centre, Level 12, Uptown Tower, Dubai, United Arab Emirates ("Tokinvest DMCC").

Tokinvest DMCC is the Issuer of the DTFW Token described in this whitepaper.

A.2 Incorporation and Registration

Tokinvest DMCC is registered under DMCC licence number DMCC-928046, with a date of incorporation of 10 May 2024.

A.3 Regulatory Status & Licensing

Tokinvest DMCC is licensed by the Dubai Virtual Assets Regulatory Authority (VARA) as a Broker-Dealer and Issuer (Licence No. VL/2024/12/004).

Under this licence, Tokinvest DMCC is authorised to design, structure, issue, market, distribute, and facilitate secondary trading of Virtual Assets, including Asset-Referenced Virtual Assets (ARVAs), in accordance with applicable VARA Rulebooks.

A.4 Ownership and Senior Management

Tokinvest DMCC is an independently owned entity with no parent company.

The current shareholders and senior management include:

- **Scott Thiel** – Chief Executive Officer
- **Matt Blom** – Chief Strategy Officer
- **Robert Cooper** – Chief Operating Officer
- **James Byrne** – Chief Technology Officer

The senior management team collectively brings experience across digital assets, financial markets, technology, and regulated financial services. Responsibility for day-to-day management and strategic oversight rests with this team, subject to Tokinvest's internal governance framework and VARA regulatory oversight.

A.5 Fit and Proper Status

To the best of Tokinvest DMCC's knowledge and based on available information available at the date of this whitepaper:

- no member of its board of directors, senior management, or other significant decision-makers has been convicted of any offence involving dishonesty, fraud, financial crime, money laundering, insider trading, or offences related to companies, banking, or insolvency, whether before the courts of the UAE or any other jurisdiction; and
- no such individuals are currently subject to any ongoing criminal investigations or regulatory enforcement actions.

A.6 Governance Framework

Tokinvest DMCC operates under a formal corporate governance framework designed to ensure effective oversight, accountability, and risk management across all regulated activities.

The Board of Directors is responsible for:

- setting strategic direction;
- approving material business and product decisions;
- overseeing risk management and regulatory compliance; and
- supervising senior management.

The Board meets at least quarterly, with decisions taken by majority vote.

The governance arrangements described in this Appendix are intended to support regulatory compliance and internal oversight and do not create contractual rights or obligations enforceable by Tokenholders.

The governance structures, committees, and internal controls described in this Appendix reflect Tokinvest's enterprise governance framework and are subject to ongoing refinement in accordance with regulatory expectations and business needs.

A.7 Committees and Oversight Structure

The Board may delegate specific responsibilities to standing committees or executive forums operating under formal terms of reference, which may include:

- **Risk Committee** – enterprise and product-level risk oversight
- **Listing Committee** – review and approval of new Virtual Asset issuances
- **Compliance & AML Oversight Committee** – regulatory compliance and financial crime controls
- **Technology / Product Committee** – platform integrity, smart contract design, and DLT oversight
- **Cyber Security Committee** – information security, resilience, and incident response

Each committee reports to the Board or relevant executive committee as appropriate.

A.8 New Product Approval Process

All Virtual Asset issuances, including the Token, are subject to Tokinvest's formal New Product Approval Process.

Each proposed product undergoes a structured risk assessment covering, at a minimum:

- strategic risk;
- liquidity risk;
- legal and regulatory risk;
- compliance risk;
- market and credit risk;
- operational and technology risk; and
- reputational risk.

Residual risk is classified as **low**, **medium**, or **high**, with escalation and approval thresholds applied accordingly. Products assessed as high residual risk require Board-level approval prior to launch.

A.9 Financial Controls and Regulatory Capital

Tokinvest DMCC maintains regulatory capital in accordance with VARA requirements, held in a dedicated capital lock-up account with a UAE-authorized bank.

The company:

- submits periodic financial and capital adequacy reports to VARA;
- maintains segregation between regulatory capital, operational funds, and client money; and
- is subject to annual audit by a UAE-registered audit firm.

A.10 Client Money and Asset Safeguarding

Client fiat funds received in connection with subscriptions, distributions, or secondary-market trading are held in designated client money accounts with UAE-authorized banking institutions, segregated from Tokinvest DMCC's own funds.

Tokinvest DMCC is not a VARA-regulated Custodian. Virtual Asset custody is provided solely as an incidental activity to its Broker-Dealer services through:

- VARA-licensed third-party custodians; and/or
- regulated custody technology providers.

Tokinvest remains responsible for oversight of outsourced custody arrangements in accordance with VARA requirements.

A.11 AML / CFT and Financial Crime Controls

Tokinvest DMCC maintains AML/CFT policies and procedures fully compliant with:

- VARA Rulebooks;
- UAE Federal Decree-Law No. 20 of 2018; and
- Cabinet Decision No. 10 of 2019.

All investors are subject to:

- risk-based KYC and customer due diligence;
- beneficial ownership verification (where applicable);
- sanctions and adverse-media screening; and
- ongoing monitoring.

Enhanced due diligence is applied where required. Oversight is conducted by Tokinvest's appointed **Money Laundering Reporting Officer (MLRO)**.

A.12 Outsourcing and Third-Party Providers

Tokinvest DMCC relies on third-party service providers for certain operational functions, including:

- banking and payment services;
- Virtual Asset custody;
- blockchain infrastructure; and
- technology services.

All outsourcing arrangements are subject to due diligence, contractual controls, and ongoing oversight. Outsourcing does not relieve Tokinvest DMCC of its regulatory responsibilities under VARA.

A.13 Conflicts of Interest and Market Conduct

Tokinvest DMCC maintains policies and controls to identify, manage, and mitigate conflicts of interest arising from its roles as issuer, broker-dealer, and platform operator.

These include:

- segregation of duties;
- restrictions on proprietary trading;
- governance oversight of principal trading for settlement facilitation only; and
- market surveillance and post-trade review.

Tokinvest confirms that, to the best of its knowledge no member of its board of directors, executive management, or any other significant person with decision-making authority has any personal, professional, or financial relationship or interest with any individual associated with DMCC or associated companies nor with any party involved in the operation, management, or governance of Distributed Ledger Technology (DLT) platform Binance Smart Chain (BSC). This affirmation is made to ensure full transparency and to confirm that there are no existing or potential conflicts of interest that could impair the independence or integrity of Tokinvest's operations or its relationship with investors

A.14 Other Parties Involved in the Issuance

The following entities are involved in each DTFW Token issuance in the capacities described below.

Tokinvest DMCC

- **Issuer and Platform Operator**

Tokinvest DMCC acts as the regulated issuer of the Tokens and operates the primary issuance process and approved secondary-market trading platforms in accordance with its VARA licence.

DMCC

- **Tradeflow Platform Operator**

Dubai Multi Commodities Centre ("DMCC") operates the Tradeflow platform, an electronic registry used for the registration, recording, and administration of commodity ownership instruments, including warehouse warrants. The underlying warrant to which each Token relates is issued, recorded, and maintained within the DMCC Tradeflow system in accordance with the applicable Tradeflow rules and procedures..

Brinks Global Services

- **Custodian**

The Underlying Asset to which each warrant relates is held in physical custody by an independent third-party custodying agent (the "Custodian"), which may include Brinks or another internationally recognised vaulting and logistics provider, pursuant to a custody or storage agreement entered into with the relevant warehouse operator or warrant holder.

For the avoidance of doubt:

- none of the above entities acts as a trustee, fiduciary, or investment adviser to Tokenholders;

No Tokens are allocated to Tokinvest DMCC, Dubai Multi Commodities Centre, or the Brinks Global Services at issuance. Tokens are issued solely to eligible investors who have completed all applicable AML/KYC onboarding and have been approved as whitelisted participants on the Tokinvest platform.

A.15 Governance, Risk and Product Approval Flow (Illustrative)

The diagram below provides a high-level, illustrative overview of Tokinvest's governance, risk oversight, and product approval structure as it relates to regulated Virtual Asset issuances.

This diagram is provided for explanatory purposes only and does not form part of the contractual terms of any Token issuance. Specific committee composition, approval thresholds, and internal processes may evolve over time in accordance with regulatory requirements and internal governance policies.

APPENDIX B

TRADEFLOW WARRANT AND ASSET CUSTODY DETAILS

B.1 Vault Operator/Warehouse Keeper

Brinks Global Services is the DMCC-approved warehouse operator (Warehouse Keeper) responsible for physical custody of the underlying asset within the Brinks Almas Vault facility. The custody of the asset is recorded within the DMCC Tradeflow system through the applicable Tradeflow warrant.

B.2 Vault Name and ID

Brinks Almas Vault - BGSDX-0003

B.3 Warrant Number, Current Status & Access

Warrant Number: SAM2T

Status: ACTIVE

The Tradeflow Warrant corresponding to this Reference Asset:-

DMCC TRADEFLOW	
Vault Operator Name	إسم مشغل الخزنة
BRINKS GLOBAL SERVICES (BRANCH)	
Vault Name and ID	إسم و هوية الخزنة
Brinks Almas Vault	
BGSDX-S-0003	
Warrant Number	رقم الضمان
SAM2T	
Warrant Issue Date: 15:35 on 17th December 2025	تاريخ إصدار الضمان
We hereby confirm that we are in receipt of the goods detailed on this warrant and confirm that these goods are stored as detailed on this warrant in favour of the bearer. Where the goods can be inspected we confirm that the goods are of apparent good order. Where the goods are in packaging we confirm that the packaging is in apparent good order but we cannot qualify the contents. This warrant is issued via DMCC Tradeflow and we hereby recognise the DMCC Tradeflow Registry in respect to the legal ownership of this document.	
HS Code	رمز الملتحق الجمركي
71069110	
HS Code Long Description	الوصف الكامل لرمز الملتحق الجمركي
Ingots of silver, unwrought.

Terms and Conditions This Warrant is bound by the Storage Operators Terms and Conditions as recorded against the inventory record on the DMCC Tradeflow service. هذا الضمان خاضع للشروط والإحكام الخاصة بأمين المخازن كما وردت في سجلات المخزون لدى منصة ترديفلو التابعة لمركز دبي للسلع المتعددة.	
 	
This DMCC Tradeflow warrant has been issued in electronic form only. 50000038134	

The document is the official warrant issued within the DMCC Tradeflow registry and confirms the existence, ownership registration, and custody status of the underlying asset.

B.4 Warrant Issue Date and Time

17th December 2025 15:35

B.5 HS Code and Long Description

71069110 - Ingots of silver unwrought

B.6 Inventory Description and Quantity

Silver bar – 1,971 kg – Purity 999.9 (99.99%) silver.

The underlying asset is a single silver bar refined by SAM Precious Metals FZ LLC and is identified in the supporting refiner documentation and assay report by Bar Number A1126 / 21.11.2025.

The weight and purity of the bar are recorded in the supporting documentation and are cross-referenced to the relevant DMCC Tradeflow Warrant (SAM2T) and related vault inventory records.

B.7 Refiner details

SAM Precious Metals FZ LLC, Dubai, UAE

B.8 Assay Certification

Supplementary Document pdf pp17

B.9 Details of any liens, pledges or encumbrances

None

B.10 Storage Governance

Subject to standard DMCC Tradeflow Corporate Access Agreement (see attached)

Custody of the underlying asset operates within the DMCC Tradeflow framework under which the warehouse operator maintains physical custody of the asset and registered warrant holders maintain title through the Tradeflow registry.

Transfers, endorsements, or other instructions relating to the Tradeflow warrant may only be executed within the DMCC Tradeflow platform by authorised users of the warrant holder in accordance with the applicable Tradeflow rules and procedures.

Following successful completion of the issuance process and transfer of the warrant, Tokinvest DMCC will become the registered warrant holder and authorised users of Tokinvest DMCC will have authority to provide such instructions within the Tradeflow system.

Release of the underlying asset from the warehouse facility is governed by the applicable warehouse agreement and Tradeflow framework and may only occur upon instruction from the warrant holder in accordance with those arrangements.

DMCC Tradeflow -
Corporate Access Agr

B.11 Storage Security Controls

To be provided by Brinks (warehouse agreement attached)

Warehouse
Agreement Signed_I

B.12 Inspection and Audit Reports (past and ongoing)

Inspection and audit documentation relating to the custody of the underlying asset is maintained by the vault operator (Brinks Global Services). Internal inventory audits are conducted on a weekly basis and DMCC conducts periodic audits of vault inventory under the Tradeflow framework. The most recent inspection or audit documentation will be provided by the vault operator and forms part of the supporting documentation pack.

Any discrepancies identified through inspection or audit processes are addressed through the vault operator's operational escalation procedures in accordance with the applicable custody and storage arrangements.

B.13 Certificate and Schedule of Insurance

The underlying asset held within the Brinks vault facility is insured under the applicable insurance arrangements maintained within the Brinks Global Services custody framework. Brinks maintains insurance coverage for assets held in its vault facilities under a global insurance policy which is renewed on an annual basis. The relevant insurance certificate and policy schedule form part of the supporting documentation referenced in this appendix.

For the purposes of the DTFW issuance, custody, storage and insurance costs relating to the underlying asset are prepaid for the full duration of the Economic Term of the token issuance.

Although the underlying insurance policy is renewed annually as part of the Brinks global insurance programme, the prepaid funding arrangement ensures that the applicable custody and insurance arrangements remain in place throughout the life of the issuance.

The applicable insurance arrangements are maintained within the custody framework associated with the underlying asset and the relevant storage agreements. Tokenholders do not hold direct beneficiary rights under the vault insurance policy; any insurance proceeds relating to the underlying asset would be applied in accordance with the custody and asset realisation framework described in this Whitepaper.

B.14 Tradeflow Registry Confirmation

A dated extract from the DMCC Tradeflow registry confirming the status of the warrant (SAM2T) is included in the supporting documentation pack.

The extract includes the system timestamp at the time of retrieval and confirms that the warrant is active and recorded within the DMCC Tradeflow system in respect of the underlying asset described in this whitepaper.

The registry record identifies:

- Warrant Number: SAM2T
- Vault Operator: Brinks Global Services
- Vault Location: Brinks Almas Vault (DMCC-approved facility)
- Inventory Description: Silver bar – 1,971 kg – Purity 999.9

The Tradeflow registry entry corresponds to the physical asset held in the Brinks vault facility and is cross-referenced to the refiner documentation and assay certification provided in the supporting documentation.

B.15 Asset Identification and Refiner Documentation

The underlying asset is uniquely identifiable through multiple corresponding records and physical identifiers.

Refiner: SAM Precious Metals FZ LLC

Refiner Bar Number: A1126 / 21.11.2025

Weight: 1,971 kg

Purity/Fineness: 999.9 (99.99%) silver

Tradeflow Warrant Number: SAM2T

Vault Operator / Location: Brinks Global Services, Brinks Almas Vault

Purity of the bar has been confirmed in the assay and test documentation issued by SAM Precious Metals FZ LLC dated 22 November 2025.

The assay report records an initial measured weight of 1,971.235 kg, with the final recorded weight of 1,971 kg reflecting the removal of a small sample during the assay process conducted in accordance with ISO 11596:2021 sampling standards.

The bar is further identified and cross-referenced through the relevant DMCC Tradeflow Warrant, supporting refiner documentation, assay certification, and the applicable vault inventory records. Dated photographic evidence of the bar, including visible markings, dimensions, and condition, is included in the supporting documentation pack and cross-referenced to the warrant and inventory record.

B.16 Operational Dependencies and Continuity Arrangements

The operation of the DTFW Token issuance relies on several third-party infrastructure providers involved in the custody, storage, registry, and administration of the underlying asset and associated digital token infrastructure.

The principal operational dependencies include:

Tradeflow Registry (DMCC)

Maintains the electronic registry for warehouse warrants representing the underlying commodity asset.

Vault Operator (Brinks Global Services)

Provides physical custody and secure storage of the underlying silver bar within the Brinks Almas Vault.

Digital Asset Custody (Hex Trust)

Provides custody services for digital assets and token infrastructure associated with the issuance.

Sale Agent (appointed at expiry)

A DMCC-approved sale agent may be appointed to facilitate the liquidation of the underlying asset at the end of the Economic Term.

Pricing Sources

Market pricing references used for valuation of the underlying commodity are based on prevailing market prices for silver.

Banking Infrastructure

Investor subscription funds and distribution proceeds are processed through the Issuer's designated banking arrangements in accordance with applicable regulatory requirements.

The Issuer maintains operational procedures intended to ensure continuity of administration and asset management in the event of service provider disruption, including the ability to appoint replacement service providers where required.

APPENDIX C

TOKENISATION, CUSTODY, SETTLEMENT AND FLOW OF FUNDS

C.1 Distributed Ledger Technology (DLT)

The Tokens are issued as blockchain-based Virtual Assets using distributed ledger technology ("DLT") selected by Tokinvest based on security, scalability, regulatory compatibility, and operational suitability. At the time of issuance, the Tokens are implemented on the Binance Smart Chain (BSC) DLT, a public, EVM blockchain compatible with industry standards.

The DLT is used to:

- record token issuance and total supply;
- enable secure transfer of the Tokens between approved accounts; and
- support lifecycle events, including minting at the Token Generation Event (TGE) and burning at expiry.

The DLT does **not** control, manage, or operate the Reference Asset, nor does it determine economic performance or distributions.

C.2 Token Standard and Smart Contracts

The Tokens are implemented using an industry-standard token protocol compatible with ERC-based frameworks commonly used for regulated Virtual Assets.

The smart contracts governing the Tokens define:

- token supply and transfer rules;
- linkage to issuance-specific identifiers; and
- lifecycle constraints consistent with the fixed-term, amortising structure described in this whitepaper.

Smart contracts used for Token issuances are subject to internal review and independent third-party assessment prior to deployment, in accordance with Tokinvest's technology governance and risk management procedures. The DTFW token;

- uses a standard ERC-1404 transfer-restriction framework implemented as a BEP-20 compatible token on BNB Smart Chain I;
- smart contract has undergone a comprehensive independent audit, most recently on 14 December 2022;
- audit was conducted by Block Solutions, a reputable cybersecurity and blockchain auditor; and
- results of the audit confirmed that the smart contract is secure, and functions as intended, with no critical vulnerabilities detected. While reasonable steps are taken to mitigate smart contract risk, no assurance is given that smart contracts are free from defects, vulnerabilities, or unforeseen behaviour.

C.3 DLT Consensus Mechanism

BNB Smart Chain uses a Proof-of-Staked-Authority (PoSA) consensus mechanism under which a limited set of validators produce and validate blocks. Validator selection is based on staking and governance processes defined by the BNB Chain protocol.

The design of the token indicate that there are no observable risks of a variance to the rights of token owners should other DLTs be used in the future.

BNB Smart Chain relies on a limited validator set. While this may increase throughput and efficiency, it may also introduce concentration risk relative to more decentralised networks. Tokinvest does not control, operate, or influence BNB Smart Chain validators.

Validators on the BSC chain receive a portion of transaction fees as well as block rewards. BSC transaction fees are paid in BNB and are typically low and predictable but may fluctuate based on network demand. They depend on the gas price and the limit used by each transaction.

C.4 DLT Independence and Future Flexibility

The contractual economic rights associated with the Tokens are defined exclusively by:

- this whitepaper; and
- the applicable legal and contractual documentation.

Those rights are not dependent on the specific DLT network used for token issuance.

Subject to regulatory approval, technical feasibility, and applicable disclosures, the Issuer reserves the ability to:

- migrate tokens to an alternative DLT;
- enable interoperability with other networks; or
- upgrade smart contract implementations,

provided that such actions do not alter the fundamental economic rights of tokenholders. There is no obligation to undertake any such migration or upgrade.

C.5 Custody and Transfer Controls

The Tokens may be held:

- within custody arrangements provided through the Issuer using VARA-licensed third-party custodians; and/or
- in other approved custody configurations permitted under the Issuer's platform rules and applicable regulation.

Transfers of Tokens are facilitated through the Issuer's investor platform and are subject to:

- AML/KYC and sanctions controls;
- transfer restrictions embedded in smart contract logic where applicable; and
- the Issuer's market conduct and compliance policies.

Self-custody may be permitted only where supported by the issuance structure and regulatory requirements, and subject to the Issuer's approval.

C.6 Smart Contract Governance, Control and Incident Response

The smart contracts used to issue and manage the Tokens are deployed and administered by the Issuer in its capacity as regulated issuer and platform operator.

Authority and control

- the Issuer is the sole party with authority to deploy, upgrade, modify, pause, or otherwise administer the smart contracts associated with the Tokens.
- Administrative access rights (including any privileged or "admin" functions) are subject to the Issuer's internal governance, access control, and compliance frameworks and are not accessible to tokenholders.

Change management

- No material changes have been made to the smart contracts following initial deployment, other than routine technical maintenance where applicable.
- Any future upgrade or modification would be undertaken only where reasonably required for security, regulatory compliance, or operational continuity, and would not be intended to alter the fundamental economic rights of tokenholders as described in this whitepaper.

Incident response

In the event of a material smart contract vulnerability, exploit, or other critical incident, the Issuer may take reasonable and proportionate steps to protect investors and market integrity, including:

- temporary suspension of token transfers;
- disabling affected contract functions;
- coordination of remedial technical measures; and
- where necessary, burning and reissuing Tokens to restore correct balances and functionality.

Any such actions would be undertaken in accordance with the Issuer's VARA-approved technology governance, incident response, and communications procedures. the Issuer is not required to guarantee uninterrupted operation of smart contracts and does not accept liability for losses arising solely from DLT-related failures or vulnerabilities, except to the extent required under applicable law.

C.7 Environmental Impact Considerations

the Issuer is committed to responsible and sustainable use of technology.

The DTFW Token is issued on BNB Smart Chain, which utilises a Proof-of-Staked-Authority (PoSA) consensus mechanism under which a limited set of validators produce and validate blocks. This consensus model is generally recognised as more energy-efficient than proof-of-work based blockchain networks due to its reduced computational requirements.

While the Issuer does not control the environmental footprint of public blockchain networks, the selection of distributed ledger infrastructure takes into account network efficiency, transaction scalability, and relative energy consumption characteristics of available blockchain networks.

C.8 Technology Risk Disclosure

Use of DLT involves inherent risks, including:

- network congestion or downtime;
- protocol upgrades or changes;
- validator concentration or failure;
- cybersecurity threats; and
- potential loss or delay of transactions.

These risks are described further in the Risk and Disclosure Statement and should be considered by all investors.

C.9 Issuance Process and Tradeflow Warrant Registration

For each issuance, the Reference Asset is acquired and registered within the DMCC Tradeflow system following successful completion of the subscription process.

The operational sequence is as follows:

1. Subscription Close - the subscription period closes and the Issuer verifies that the minimum subscription threshold has been satisfied.
2. Funds Reconciliation - investor subscription funds are reconciled within the Issuer's designated client money accounts and internal issuance records are verified.
3. Reference Asset Acquisition and Registration - upon successful completion of reconciliation checks, the Tradeflow warrant representing the Reference Asset is transferred or registered within the DMCC Tradeflow system with Tokinvest DMCC as the warrant holder.
4. Issuance Controls - prior to token minting, the Issuer confirms that the warrant registration, subscription reconciliation, and internal issuance records are consistent.
5. Token Minting and Allocation - following confirmation of the above checks, tokens corresponding to the issuance are minted and allocated to investors' wallets in accordance with the issuance documentation.

These steps are intended to ensure that token issuance occurs only after the Reference Asset has been secured within the Tradeflow registry and reconciliation checks have been completed.

APPENDIX D

ADDITIONAL REGULATORY DISCLOSURES & DEFINITIONS

D.1 Status of this Whitepaper

This whitepaper is a regulated disclosure document prepared by the Issuer in accordance with the requirements of the Dubai Virtual Assets Regulatory Authority (VARA) for the issuance of Asset-Referenced Virtual Assets (ARVAs).

This whitepaper:

- does not constitute a prospectus under UAE securities legislation;
- does not constitute an offer of securities; and
- is intended to provide product-specific disclosure for the Tokens described herein.

This whitepaper must be read together with:

- the applicable Risk and Disclosure Statement;
- issuance-specific subscription documentation; and
- the Issuer's Brokerage Terms of Business,

each of which forms part of the overall disclosure and contractual framework applicable to the Tokens.

D.2 No Investment Advice or Fiduciary Relationship

This whitepaper is provided for disclosure and informational purposes only.
the Issuer:

- does not provide investment advice, portfolio management, or personalised recommendations;
- does not act as a fiduciary, trustee, or adviser to Tokenholders; and
- does not assess the suitability of Tokens for individual investors.

Investors remain responsible for determining whether participation in a Token issuance is appropriate for their own circumstances, taking into account the disclosures provided and the applicable Risk and Disclosure Statement.

D.3 Eligibility, Jurisdictional Restrictions and Transfer Limitations

Participation in Token issuances is limited to investors who:

- have completed the Issuer's AML/KYC and onboarding procedures; and
- are eligible under applicable laws, regulations, and sanctions regimes.

Tokens may not be offered, sold, or transferred in jurisdictions where such activity would be unlawful or require regulatory approval not obtained.

the Issuer may restrict, suspend, or refuse subscriptions or transfers where required to comply with:

- applicable law or regulation;
- VARA Rulebooks; or
- internal compliance and risk controls.

D.4 Custody, Wallets and Private Keys

Tokens may be held through custody arrangements facilitated by the Issuer using VARA-licensed third-party custodians, or through approved self-custody configurations where permitted.

Where Tokens are held in self-custody, investors are responsible for maintaining access credentials and safeguarding private keys. the Issuer does not control self-custodied wallets and cannot restore access where credentials are lost or compromised.

Custody arrangements and limitations are described further in the relevant appendices and platform documentation.

D.5 Distributed Ledger Technology

The issuance, transfer, and recordkeeping of Tokens rely on distributed ledger technology.

DLT involves operational and technical risks, including protocol upgrades, network disruption, validator performance, and smart contract behaviour. the Issuer selects and maintains DLT infrastructure based on security, scalability, and regulatory compatibility considerations, but does not control public blockchain networks.

DLT risks are described further in the Risk and Disclosure Statement.

D.6 Amendments and Updates

the Issuer may amend or update this whitepaper in accordance with applicable VARA requirements and law.

Material updates will be communicated through the the Issuer platform or other appropriate channels. Where required by regulation, investor consent or additional acknowledgements may be obtained.

D.7 Governing Law and Jurisdiction

Unless otherwise specified in issuance-specific contractual documentation:

- the Tokens; and
- the contractual rights and obligations arising in connection with the Tokens
- the offer, distribution, and issuance of the Tokens

are governed by DIFC law.

The Issuer submits to the exclusive jurisdiction of the courts of the Dubai International Financial Centre (DIFC) in relation to disputes arising from the offer, issuance, administration, and operation of the Tokens, subject to mandatory applicable law.

D.8 Definitions and Interpretation

Capitalised terms used in this whitepaper and not otherwise defined have the meanings given to them in:

- the Issuer's Brokerage Terms of Business; or
- the applicable issuance-specific documentation.

In the event of inconsistency between:

- this whitepaper;
- the Risk and Disclosure Statement; and
- the contractual terms governing the Tokens,

the contractual terms shall prevail to the extent permitted by applicable law.

D.9 Regulatory Positioning of DTFW Tokens

DTFW Tokens are issued as Asset-Referenced Virtual Assets under the VARA Rulebook. They:

- carry no regulatory requirements related to settlement or transfer of title of the reference asset; The Reference Asset remains unchanged throughout the life of the DTFW token, is held securely by the Issuer at all times, and is unaffected should the ownership of the DTFW token change (which may take place through purchase/sale in the the Issuer secondary market or on other regulated trading platforms);
- provide right of redemption for the Reference Asset subject to the terms described in this whitepaper; and
- confer right of ownership meaning that the value of the ARVA should be stable to the Reference Asset subject to potential minor temporary fluctuations due to supply and demand for tokens.

D.10 Maintenance of Reserve Assets

The VARA regulatory framework requires issuers of certain ARVAs to maintain sufficient Reserve Assets in accordance with Rule III.C.1. of Annex 2 of the VA Issuance Rulebook. In respect of the DTFW token, the Issuer complies with this requirement by designating the Tradeflow Warrant (the “Reference Asset”) as the Reserve Asset.

Accordingly:

- the Reserve Asset and the Reference Asset are the same asset (i.e., the Tradeflow Warrant), and are held by the Issuer on behalf of Tokenholders;
- the Issuer maintains sufficient holdings of the Tradeflow Warrant at all times to ensure full backing of all issued DTFW tokens on a 1:1 basis by weight;
- the Tradeflow Warrant represents clear and enforceable legal title to the underlying asset, which is insured and securely warehoused in a DMCC-approved facility;
- the token minting process is strictly controlled to prevent over-issuance, such that DTFW tokens are only issued when a corresponding amount of the Tradeflow Warrant is held, and no additional tokens may be issued once the Reference/Reserve Assets have been fully tokenised.

This structure ensures that the Issuer continuously maintains sufficient Reserve Assets in compliance with applicable VARA requirements, while safeguarding the rights of Tokenholders.

D.11 Entirety of Disclosure

Sections 1–9 of this whitepaper, together with the appendices, the Risk and Disclosure Statement, and issuance-specific materials, comprise the complete disclosure framework for the Tokens.

D.12 Third-Party Rights and No-Recourse

The Token structure involves the use of certain third-party service providers including, but not limited to, the Dubai Multi Commodities Centre (DMCC), the Tradeflow registry, warehouse operators, custodians, insurers, and other operational service providers.

These parties perform limited operational roles in connection with the storage, registration, custody, or administration of the underlying asset and associated infrastructure.

Tokenholders are not parties to any contractual arrangements between the Issuer and these third-party service providers and do not have direct contractual or legal rights of recourse against them.

Any rights relating to the Reference Asset, custody arrangements, or related operational services arise solely through the contractual framework established between the Issuer and such third parties.

Tokenholders’ rights in respect of the Token arise exclusively against the Issuer in accordance with the terms of this whitepaper and the applicable issuance documentation.

APPENDIX E**SUPPLEMENTARY DOCUMENTATION DETAILS**

(please see 17 page supporting documents pdf included with submission)

E.1 Letters of Adherence pp1-6

Signed Letters of Adherence for SAM Precious Metals, Tokinvest and Brinks

E.2 Inventory Details Report pp7

Inventory report for the Silver Bar with warrant status, issue date and other information

E.3 Silver Bar Report pp8-15

Report compiled by SAM Precious Metals detailing fabrication method and process, weight and dimensions.
