

Broker Dealer Policy

Purpose and Scope

Ctrl Alt Solutions DMCC Ltd. (the “Firm”) is registered with VARA, (Reference No. VL/25/05/002) as a VASP and is licensed to carry out Broker / Dealer activities from the DMCC. It is the Firm’s policy to comply with all applicable laws and regulations.

This means the Firm can conduct the following services —

- a)** arranging orders for the purchase and sale of Virtual Assets between two Entities;
- b)** soliciting or accepting orders for Virtual Assets and accepting fiat currency, or other Virtual Assets, for such orders;
- c)** facilitating the matching of transactions in Virtual Assets between buyers and sellers;
- e)** making a market in Virtual Assets using client assets; or
- f)** providing placement, distribution or other issuance* related services to clients issuing Virtual Assets.

*As per Regulation II, any Entity in the Emirate that issues a Virtual Asset in the course of a business, must comply with the VA Issuance Rulebook, as may be amended from time to time.

Ctrl Alt will additionally be an approved Issuer of Virtual Assets and will therefore also be carrying out Issuance related activities.

We consider these to be Category 2 issuances as Category 1 primarily relates to Virtual Assets who purport to maintain a stable value in relation to the value of one or more fiat currencies - this does not apply to Ctrl Alt.

This policy establishes the standards and procedures for the Ctrl Alt’s broker-dealer services, ensuring compliance with VARA’s regulatory framework. It applies to all broker-dealer activities related to the execution, distribution, management, and protection of virtual assets (VAs). The policy also sets out responsibilities for customer protection, market integrity, and transparent business operations. This policy focuses primarily on the trading of DMCC Gold tokens.

1. Internal Rules and Compliance Programmes

Ctrl Alt has established a comprehensive monitoring framework to ensure compliance with the regulatory requirements as a VARA regulated Broker Dealer and Issuer. These include:

Three Lines of Defence: The first line of defence is the automated controls and the operations team who oversee any alerts, providing escalation to the compliance officer who serves as the second line of defence. The third line of defence is the audit function.

Dedicated Compliance Function: The Compliance Officer ensures adherence to regulatory standards and internal controls.

Adequately resourced Department: Ctrl Alt will ensure that an adequately resourced department is in place to oversee the trade flow and control monitoring and to ensure all customer orders are executed efficiently and appropriately in line with regulations.

Insider Lists: Ctrl Alt must maintain complete and up-to-date lists of all Entities, including their Board, Staff, Group, advisors, accountants or other third-party agents and service providers, and those of their Group, that have or may have access to Inside Information in the course of Ctrl Alt's business or carrying out their respective roles. Ctrl Alt shall update Insider Lists accordingly while such information remains Inside Information and records are to be retained for at least 8 years.

Training Programmes: Continuous training for employees to recognise and report suspicious activities.

Trade Surveillance: Automated monitoring of trading activity via an in-house system to detect market abuse and ensure compliance.

Sanctioning and Disciplinary Policy: Breaches result in disciplinary actions, including dismissal and regulatory notification.

Whistleblowing Framework: Employees are encouraged to report suspected market offences confidentially and without fear of retaliation.

System Capacity: Ctrl Alt have established the following provisions that ensure its systems have the capacity and capabilities to execute client orders effectively and reliably.

- **Scalability:** We have ensured that systems are scalable to handle high volumes of client orders, especially during periods of extreme market activity. We conduct capacity testing to simulate peak loads and verify system performance under stress.
- **Order Handling:** We have developed mechanisms, including queuing to process client orders efficiently, with minimal latency and no bottlenecks, including prioritization for time-sensitive orders.
- **System Redundancy:** We have implemented redundant systems and failover protocols to maintain uninterrupted service in case of system outages.
- **Real-Time Processing:** We designed our systems to process and execute orders in real time, ensuring clients receive the best available outcome based on market conditions.

2. Order Execution and Routing Process

Ensuring that all customer orders are processed promptly and accurately is a priority for Ctrl Alt. To achieve this, a robust, automated order handling system has been established.

Order Receipt and Handling:

Customers place orders via the Ctrl Alt Platform, which is purpose built to ensure seamless, efficient and transparent order management. The platform incorporates the following key features:

- **Accurate Order Capture and Audit Trail:** Every order is promptly and precisely captured, timestamped, and recorded, creating a robust and transparent audit trail for tracking and compliance.
- **Comprehensive Validation and System Controls:** The platform includes advanced system controls to review and validate all orders. This ensures strict adherence to customer instructions.
- **Automated Order Processing:** All orders are processed exclusively through the Ctrl Alt Platform. Strict parameters are enforced for order acceptance; any order failing to meet these criteria is automatically rejected. This includes but is not limited to balance, account verification and other suitability checks. Customers are promptly notified of the rejection, along with the specific reasons for it.
- **Real-Time Trade Flow Monitoring:** The Ctrl Alt platform enables continuous, real-time oversight of the entire trade flow, ensuring optimal performance, transparency, and immediate detection of any irregularities.
- **Fee Disclosure:** Prior to execution, customers will receive a disclosure (on the trading screen) of all fees or commissions payable in relation to the transaction, both due to Ctrl Alt and any counterparties. The exception to this is where Ctrl Alt provides another VASP, a Qualified Investor, or an institutional investor with a quote to execute at Ctrl Alt's discretion as per rule II.A.2 of the VARA Broker Dealer Services Rulebook.

Order Routing:

For customers making their initial purchase of a token, there are two options. They can participate in a Capital Raise for a new token or they can look to purchase an existing token in the secondary market from another customer on the Ctrl Alt Platform.

Capital Raise: Customers commit a set amount to the capital raise via an order they place on the Ctrl Alt Platform. The price per token for the order is determined by the virtual asset issuer. Once the full allocation of the capital raise is committed, the order is executed.

Secondary Marketplace: Customers with existing tokens or those customers who have completed onboarding and are looking to purchase an existing token can do so via the secondary marketplace. Customers will be able to list a token for sale at their chosen price, or purchase a token that has already been listed by a seller. The marketplace operates as an Over-the-Counter (OTC) system. The main features of this marketplace are detailed below.

- **Trade Matching:** The marketplace operates as an Over-the-Counter (OTC) trading platform, where customers list tokens for sale or purchase at their chosen price, and trades are executed on a one-to-one basis rather than through a centralized order book.
- **Pricing Mechanism:** The pricing is user-determined (e.g., a seller sets a specific price) and transactions are executed bilaterally. The marketplace does not actively facilitate liquidity aggregation or price discovery across the broader market.
- **Restricted Access:** Only pre-approved, verified customers who have undergone KYC/AML checks and onboarded into the system are able to access the marketplace. This creates a controlled, private environment for trading.
- **Role of the Platform:** The marketplace in this arrangement primarily acts as a broker-dealer, facilitating secondary trading of tokens as a regulated intermediary under VARA permissions. The platform does not function as a central counterparty, nor does it perform exchange-like services such as continuous trading, market-making, or liquidity provision.

Order Transmission & Execution Monitoring:

Quality Assurance: Robust internal controls have been implemented to continuously monitor best execution principles. This is achieved via our internal monitoring system. The system uses a set list of SQL queries which analyse system data and produce results for further investigation. The controls include:

- Orders taking too long to execute (over 5 mins)
- Orders with unusual execution time (outliers)
- Pending orders
- Cancelled/rejected orders
- Partially filled orders
- Unexecuted orders
- Duplicate orders

Anomaly Detection and Reporting: Any execution anomalies or failures are promptly flagged, thoroughly reviewed, and documented. These incidents are

investigated and reported internally to uphold operational excellence and transparency.

Governance and Oversight: Execution performance statistics are compiled and presented quarterly to the board, providing insights into system performance and ensuring ongoing compliance with strategic objectives.

Automated Settlement Process: Matched trades are processed through a fully automated settlement system, minimising the risk of mismatches or discrepancies. This ensures a seamless and efficient settlement experience. Which is dependent on fiat and any token transfer settlements.

Issuance & Timing of Virtual Asset Settlements: The issuance and settlement of virtual assets should be executed promptly, ensuring compliance with regulatory timelines and transparency to maintain trust and operational efficiency.

Timely Confirmations: Customers receive settlement confirmations promptly (via the Ctrl Alt Platform) on a T+1 basis, providing them with clear and timely updates on their transactions. Confirmations will include a disclosure of all fees or commissions payable in relation to the transaction, both due to Ctrl Alt and any counterparties.

Comprehensive Reconciliation: A rigorous internal reconciliation process ensures accurate outcomes for all stakeholders. Any discrepancies or potential issues are promptly identified, escalated for review, and corrected where necessary.

Oversight and Documentation: The settlement process is carefully monitored by the operations team, with every step documented for transparency and available for audit or review as required.

3. Market Conduct Policy

Ctrl Alt is committed to preserving market integrity and protecting customers from “market offences”. These are defined by VARA as insider dealing, market manipulation and unlawful disclosure (see Appendix).

We have established this policy to govern and monitor transactions where a risk of insider dealing exists. This applies to all employees including Board members. Our primary controls are:

- **Insider lists**

We shall maintain a list of all employees who have or may have access to “inside information” as part of their role. This will include the reason why the individual is included on the insider list and the date and time at which they were given access to the information. Any employee included on the insider list will be required to sign a declaration that they have understood their obligations as they relate to insider dealing and to the market offences more generally.

- **Dealing declarations**

The Firm's general approach to personal account transactions is that prior approval is required. Board members and Senior management will also be required to provide a six monthly declaration to the Compliance Officer which includes: the full details of any (a) virtual asset positions (including identifiers, size of holdings and the nature/history of their transactions; and (b) any shareholdings or directorships in any other legal entities (including remuneration arrangements, ownership percentages, purpose of the appointment and the full name of the entity).

The Firm reserves the right to manage any identified conflicts of interest at its absolute discretion which may include the selling of an investment or asset and/or the winding down of outside interests.

This part of the policy should also be read alongside the Firm's Conflicts of Interest policy and employees should make sure that they understand our policy on personal account transactions.

The records relating to Insider dealing and inside information will be maintained regularly and retained for at least 8 years.

- **Limited transactions with related parties**

The Firm will not enter into any transactions with a "Related Party" without the prior written consent of the Board where the value exceeds 5% of our issued share capital. The related party must not be involved (directly or indirectly) in the Board's decision.

A related party is defined as a member of the Board including the Chair, a member of the Senior Management, all other employees - and any company in which any of these in turn own 10% or more of the issued share capital or any other ownership interest including subsidiaries and affiliates or equivalent.

VARA must be provided with advance notice of such a transaction and the Firm's shareholders must be able to inspect any associated company records or documents.

We will maintain a record of such transactions and report them to VARA on a monthly basis.

- **Other controls**

To ensure compliance on the Ctrl Alt Platform, the following controls and processes have been established to detect and prevent market offences.

Trade Surveillance:

Automated Monitoring: Advanced trade surveillance controls are in place, leveraging scripting to analyse real-time production data from the internal systems. This is an internal system which has been created by us to produce results against set criteria such as those noted in the list below. The results are produced by SQL queries which analyse internal system data. These controls generate instant alerts for transactions that may indicate potential market offences, such as market manipulation, insider trading, or front-running.

Key Surveillance Parameters: The system actively monitors and flags activities such as:

- **High-Value Transactions:** Single trades involving unusually large monetary amounts.
- **High Volume of Shares:** Transactions involving an abnormally large number of shares/tokens.
- **Cumulative Large Values:** Substantial transaction values aggregated over a specific period.
- **Rapid Buying and Selling:** Patterns of frequent trades within short timeframes.
- **Spoofing:** Spoofing is a manipulative trading practice where fake orders are placed to mislead market participants, then canceled to exploit price movements. We monitor cancelled trades to assess any potential cases of spoofing.

Investigation and Reporting: Suspicious activity is promptly flagged for investigation and escalated to compliance teams for detailed review. Confirmed irregularities are documented and appropriately reported to ensure regulatory compliance and maintain market integrity. Regulatory notification may be required in some circumstances.

Prohibited Conduct Training: Employees and relevant third parties must complete regular training on prohibited practices, including market manipulation tactics and insider trading, with emphasis on VARA's zero-tolerance stance on market offences.

Personal Account Dealing (PAD) Log: Employees and board members are required to report all personal account dealing to the compliance officer for details to be added to the PAD log. This enables the compliance officer to identify any situations where inside information may have been used. Further details on this process are set out in the Conflicts of Interest Policy.

Reporting Requirements: Suspected market abuses are escalated to senior compliance personnel and, where necessary, reported to VARA in compliance with regulatory reporting obligations. Further detail on this process is set out in the AML Policy.

4. Best Execution Requirements

As noted in the order routing section above, initially, orders will be executed exclusively through a Marketplace system within the Ctrl Alt Platform. Ctrl Alt will oversee the Marketplace in order to monitor best execution taking into account the factors noted below where they are relevant to our models.

Ctrl Alt is committed to the principle of best execution in relation to customer orders. We will consider price, costs, speed, likelihood of execution, and settlement. All executions must comply with VARA's best execution standards.

Best Execution Factors: When executing and / or routing customer orders, Ctrl Alt will consider the following factors to achieve the best possible outcome:

1. **Price:**
2. **Costs:** Including execution and transaction fees.
3. **Speed of Execution:** Ensuring timely order execution.
4. **Likelihood of Execution and Settlement:** Considering the reliability and stability of the trading venue.
5. **Order Size:** Considering the impact of large orders on market prices.
6. **Nature of the Order:** Recognizing specific customer instructions or requests.
7. **Any Other Relevant Considerations:** In line with the interests of the customer.

The relative importance of these factors will vary based on the following:

- The characteristics of the customer (retail vs. professional)
- The type of virtual asset
- The nature of the transaction
- Market conditions at the time of execution
- The relevant part of our business model including whether any external benchmarks exist to enable an effective comparison.

Quality Assessment: Execution quality is assessed regularly, and where required, adjustments are made to execution venues or routing strategies if needed to enhance performance.

Customer Disclosures on Best Execution: Where orders are routed via an exchange, customers will be provided with detailed information about the Ctrl Alt's best execution policy, including criteria for routing decisions, periodic review processes, and performance evaluations to ensure transparency and customer understanding.

Best Market Selection for VAs: The key factors, where relevant for ensuring best market selection for a virtual asset are as follows.

- **Liquidity:** Identifying markets with sufficient liquidity to execute client orders without excessive slippage.
- **Transaction Costs:** Assessing trading fees, spreads, and other costs to ensure optimal pricing for clients.
- **Market Integrity:** Evaluating the credibility, compliance standards, and operational robustness of the marketplace.
- **Regulatory Considerations:** Ensuring that the selected market operates within a regulatory framework aligned with VARA standards.
- **Documentation & Ongoing Review:** Maintain records of all assessments and decisions, including rationale for market selection and periodic reviews. Periodic review process to reassess the suitability of markets based on changing conditions.

Process in the Absence of Pricing Information: In the event that pricing data is unavailable, the following factors will be considered to aid an assessment of best execution.

- **Valuation Models:** Use historical data, on-chain activity, or peer benchmarks to determine a fair market price.
- **Expert Judgment:** Involve internal pricing experts or committees to make informed decisions based on available qualitative and quantitative inputs.
- **Transparency:** Communicate with clients about how prices are determined in such scenarios.
- **Order Modification:** Consider modifications for orders such as delaying execution until pricing clarity is achieved.
- **Documentation:** Maintain logs of how prices were determined, including methodologies, sources and approvals.

Managing Absence of Drivers or Valuation Factors: In a scenario where valuation drivers (e.g., trading volume, on-chain activity, market sentiment) are missing, it is important to establish criteria for identifying "inactive" or "illiquid" markets and adopt a risk-based approach to managing trades in such environments. Considerations include:

- **Client Consent:** Inform clients about the risks and limitations of trading in the absence of valuation factors and obtain their consent prior to execution.
- **Risk Management:** Apply additional safeguards such as pricing thresholds, trade size limits, or enhanced oversight to mitigate risks.
- **Documentation:** Retain records of the analysis, client communication, and risk mitigation steps for each trade.

5. Customer Access to and Withdrawal of Virtual Assets (VAs)

VA Access and Withdrawal Standards: Customers have secure access to their VAs through approved access points with multi-factor authentication.

High Uncertainty and Extreme Volatility Procedures: During periods of significant market uncertainty or extreme volatility in virtual asset (VA) markets, Ctrl Alt implements robust measures to ensure the protection of user assets, continuity of access, and adherence to regulatory and operational policies. These procedures are governed by the following principles and policies:

- **1:1 Asset Holding Policy:** User assets are held 1:1 on their behalf ensuring that the platform does not engage in fractional reserve practises or rehypothecation of VAs.
- **Direct Access Guarantee:** Users maintain unrestricted and direct access to the virtual assets they hold, meaning that legal ownership remains with the user, and the assets are fully segregated from Ctrl Alts operational funds and liabilities.
- **Segregation of Funds:** As noted above, user assets are stored in segregated wallets separate from company accounts, adhering to asset segregation regulations under VARA and other applicable laws.
- **Custodial Oversight and Reconciliation:** Ctrl Alt perform daily and periodic reconciliation of user balances ensures accuracy and availability of 1:1 holdings.
- **Acting on User Instructions:** Ctrl Alt remains committed to executing user instructions for the movement of virtual assets, even during high-volatility periods. This includes transfers, sales, and withdrawals.
- **Walled Garden Rules:** The ability to move VAs is subject to the rules and restrictions defined by the VA's issued on the Ctrl Alt Platform, which may include:
 - Limitations on off-platform transfers for certain tokens, in line with compliance and regulatory considerations.
 - Governance restrictions embedded in specific VAs, such as lock-up periods or trading pauses during extreme market volatility.

6. Placement and Distribution of Virtual Assets

With regards to the requirements in the VARA Broker Dealer Services Rulebook (Rule II.C), we have established the following procedures that are to be followed in the instance of the placement and distribution of a virtual asset.

Due Diligence on VAs: Prior to placing or distributing any VA, Ctrl Alt conducts thorough due diligence on any tokenization project to verify the legitimacy, market standing, and adherence to regulatory standards of not only the asset in the project but all associated parties, in particular the issuer. All VA projects must be approved by compliance before distribution.

Virtual Asset Standards: We will undertake appropriate due diligence and take all reasonable steps to ensure that Virtual Assets made available on our Platform are consistent with our Virtual Asset Standards. The standards can be found on our website.

Customer Suitability Assessments: For VA placements, the Entity responsible for onboarding the customer will determine the suitability of assets based on their risk tolerance, investment knowledge, and financial status. High-risk assets are only recommended to customers who meet the risk profile criteria.

Issuer Consent: Ctrl Alt must obtain consent from the issuer to share information.

Conflicts of Interest Management: All virtual assets should be reviewed to understand whether any known or potential conflict of interest exists. In the case of Ctrl Alt providing services to an Issuer or offeror in relation to an initial offering of a virtual asset or otherwise in relation to the placing of virtual assets with investors, Ctrl Alt will have written controls in place to prevent, monitor, manage and disclose any conflicts of interest when placing virtual assets with our own clients, including in relation to the pricing of the initial placement or distribution of those VAs. The process for identifying conflicts is detailed in the conflict of interest policy.

Disclosure on Risks and VA Characteristics: Customers receive comprehensive mandatory disclosures on VA characteristics (timing of issuance and settlement/target market), pricing determination, fees, and potential risks, in compliance with VARA's transparency requirements.

Counterparty Disclosure: Prior to agreeing on a sale to any client or investor of newly issued VAs, Ctrl Alt shall disclose to that counterparty (and obtain written consent from the Issuer or offeror allowing Ctrl Alt to disclose to the counterparty):

- the basis on which they are acting for the issuer or offerer, including whether they will receive any fees, incentives, or non-monetary benefits from the issuer or offerer or any third party in relation to the placement or distribution of the VAs;
- the timing of the issuance and settlement of the VAs; and
- information on the intended target market of the VAs.

Continuous Monitoring of Distributed VAs: VAs are monitored post-distribution to track any regulatory changes, volatility shifts, or other factors that may affect asset suitability or performance. Customers are notified of any significant changes.

7. Target Market

The target market needs to be considered as two distinct markets; the asset supply side and the investor demand side.

On the issuing side Ctrl Alt will work with bodies that are authorised to issue assets already but will enhance the process to issue these assets as tokens. We see substantive opportunities in this space, with one of our projects (based on previous years) contributing up to 140k tokens year 1, with a value of 400bn.

On the distribution side, Ctrl Alt will operate different distribution channels to facilitate the investment into and the trading of the issued tokens. Ctrl Alt will work with clients directly or by relationships with regulated brokers and/or banks in the region.

On the supply side, clients that would be of interest to Ctrl Alt include corporate advisory boutiques, digital investment banks, private banking institutions, and existing alternative asset providers. These types of businesses have assets or access to assets that either require financing or where there is a significant benefit in leveraging blockchain technology, for example real estate.

To align with VARA's expectations, our client acquisition strategy focuses on leveraging our established reputation in the B2B sector by delivering exceptional, tailored solutions that are both cost-effective and highly functional. We operate within a tight-knit network where industry success stories and demonstrated results naturally foster recognition and credibility.

Our approach is to continue providing best-in-class service while maintaining close relationships with key stakeholders in both the country and the wider region. We are proactive in identifying opportunities through attendance at industry conferences, participating in networking events, and leveraging word-of-mouth referrals from satisfied clients. By staying at the forefront of industry developments and maintaining a strong local presence, we are well-positioned to continue growing our client base and expanding our influence within the market.

8. Fees

Ctrl Alt will derive its income as follows:

1. **Set Up Fees:** Charged to the client that is using the Alt Platform. The setup fee covers any customisation and integration for the client.
2. **Ongoing Technology Fees:** For maintenance of the Alt Platform for the client as well as additional build requests.
3. **Transaction Fees:** The business will charge on the transactions it facilitates. Where there is a third-party distributor like a bank involved, these fees will be split with that party in a revenue share agreement.

9. Fair Treatment of Customers

Ctrl Alt are committed to ensuring the fair treatment of all customers. The responsibility for this lies with the senior management team. They utilise the following methods to ensure this remains a strong focus for the business in everything that they do.

1. Establishing a Customer-Centric Culture:

- a. Promote values and standards that prioritise fairness, transparency, and respect in all customer interactions.

- b. Lead by example, demonstrating commitment to ethical practices and fairness in decision-making.
- 2. Implementing Clear Policies and Standards:**
 - a. Develop and enforce guidelines that ensure consistent and unbiased customer treatment.
- 3. Ensuring Regulatory Compliance:**
 - a. Adhere to relevant consumer protection laws and regulations to safeguard customer rights.
 - b. Regularly audit practices to ensure compliance and address discrepancies promptly.
- 4. Providing Training and Development:**
 - a. Equip employees with the skills and knowledge to handle customer interactions fairly through ongoing training programs.
 - b. Emphasise soft skills like empathy, active listening, and conflict resolution. Especially where a customer is showing signs of vulnerability.
- 5. Monitoring and Addressing Feedback:**
 - a. Actively seek customer feedback through surveys, reviews, and complaints.
 - b. Use feedback mechanisms to identify unfair practices, resolve disputes, and improve service.
 - c. Root cause analysis following complaints, incidents or breaches.
- 6. Establishing Transparent Communication Channels:**
 - a. Maintain open lines of communication to explain policies, pricing, and processes clearly to customers.
 - b. Provide accessible avenues for customers to escalate concerns or complaints.
- 7. Auditing and Reviewing Performance:**
 - a. Regularly assess customer service metrics, fairness indicators, and complaint resolution times.
 - b. Hold teams accountable for maintaining high standards of customer treatment.

By embedding these practices into their strategy and operations, senior management ensures fairness while fostering trust and loyalty among customers.

Vulnerable Customers

Identifying and Supporting Vulnerable Customers: Ctrl Alt are committed to providing additional support for vulnerable customers, including those who may lack financial literacy, those facing financial hardship, or those with health issues impacting decision-making.

Measures include:

- Focus on client onboarding to identify potentially vulnerable clients and offer additional guidance and resources.

- Periodic reviews of account management practices to ensure these clients receive fair treatment and additional care if required.
- Monitoring of customer support discussions to identify any customers who may be potentially vulnerable. Any concerns regarding a customer are to be escalated to the compliance officer.

Employee Training: Our employees are trained to recognize and appropriately assist vulnerable customers, ensuring that all customers are treated with fairness, respect, and integrity.

10. Annual Review and Deficiency Addressing

Annual Policy and Procedure Review: Ctrl Alt conducts an annual review of all policies and procedures related to broker-dealer services. This review includes assessments of regulatory compliance, operational effectiveness, and alignment with best practices.

Addressing Deficiencies: Any identified deficiencies during the review are addressed with corrective measures, with specific timelines and accountability assigned. Compliance conducts follow-up checks to confirm the effectiveness of these measures, documenting all findings.

Regulatory Horizon Scanning: The compliance officer is tasked with ensuring that Ctrl Alt's policies and processes remain aligned with any future regulatory changes, developments or updates as well as any potential law or legislative changes that could impact the business, its services or its customers. Any such identified change will trigger a review process to ensure continued compliance as well as informing and training all relevant employees.

Internal & External Audit: An independent internal auditor has been appointed and will oversee all aspects of Ctrl Alt's operations. An independent external auditor may be engaged to review compliance frameworks and recommend improvements.

Material Changes: Ctrl Alt will notify all existing customers with whom they have an ongoing relationship of any material changes to their order execution arrangements or the execution policy.

11. Public Disclosures

Conflict of Interest Disclosure: Ctrl Alt maintains and publicly discloses a Conflict of Interest Policy, detailing practices for identifying and managing conflicts to ensure impartiality and protect customer interests.

Data Privacy: Ctrl Alt adheres to strict data privacy standards in line with applicable laws, detailing customer data usage, protection measures, and privacy rights. Customers are informed of these standards through public disclosures.

Whistleblowing and Complaints Handling: Customers and employees are provided with a confidential, protected whistleblowing mechanism. Customer complaints are addressed through a transparent complaints-handling procedure, with findings reported to relevant authorities as required.

Summary of Virtual Assets and Pricing Determination: Ctrl Alt provides a summary of VAs offered, including information on pricing determination, asset features, and associated risks.

Order Routing Practices and Asset Protection: Detailed information on order routing practices and asset protection arrangements are disclosed to customers, outlining security, liquidity measures, and the use of segregated accounts for asset protection.

Referral and Third-Party Arrangements: Disclosures are provided on any referral or introduction arrangements and details on third-party maintained accounts or assets, including descriptions of safeguards and oversight in place.

Whitepaper: A whitepaper will be provided for each Virtual Asset issued on the Ctrl Alt Platform, outlining its legal, financial, and operational structure. It covers ownership rights, token distribution, asset management, and exit strategies. The whitepaper must be reviewed and approved in advance by VARA to ensure compliance with Dubai's virtual asset regulations.

Risk Disclosure Statement: In addition to a whitepaper, Ctrl Alt will also provide a risk disclosure statement, as part of our regulatory disclosures. This document outlines the material risks associated with the issuance, holding, and trading of a specific virtual asset.

Appendix - Key Terms

Inside information	Means information of a precise nature, which has not been made public, and which, if it were made public, would reasonably be expected to affect the price of a Virtual Asset or would affect the investment judgment of a reasonable individual in respect of a transaction involving that Virtual Asset. The information need not be the determining factor behind any given transaction, but should have a material impact on the decision of any reasonable investor as to whether to carry out such a transaction.
Insider dealing	Arises where an Entity possesses Inside Information and uses that information by carrying out a transaction, for its own account or for the account of a third party, directly or indirectly, in relation to a Virtual Asset to which the Inside Information relates
Market manipulation	Not fully replicated here given the level of detail within the relevant regulations - see Part VIII section H of the 2023 Regulations. Can be broadly defined as any behaviour including placing a trade which: • Gives false or misleading signals as to the supply of, demand for or price of a virtual asset. • Secures, or is likely to secure, the price of a virtual asset at an abnormal or artificial level.
Unlawful disclosure	Arises where an Entity possesses Inside Information and discloses that Inside Information to any other Entity, except where the disclosure is made in the normal exercise of an employment, a profession or duties
