Bitpanda Broker MENA DMCC – Public Disclosures

Virtual Asset Pricing

Bitpanda Broker MENA DMCC ("**Bitpanda**") acts as principal in all client transactions. The Virtual Asset prices quoted to clients are determined solely by Bitpanda and are not directly sourced from external liquidity providers. Bitpanda considers a variety of factors, including market data, prices from other exchanges, and information from its liquidity providers, to establish its own proprietary pricing model.

Bitpanda applies its own spread and fees to transactions which reflect market conditions, the costs of sourcing Virtual Assets, and the risks associated with holding and trading Virtual Assets.

Bitpanda provides clients with real-time pricing information at the time of order placement. Clients are informed of the final execution price before confirming a transaction. The displayed prices may differ from those available on other platforms due to Bitpanda's independent pricing methodology, which accounts for market conditions, liquidity risks, and operational costs. Bitpanda does not guarantee that its prices will match or be the most favourable compared to other trading venues.

Order Routing

Bitpanda does not operate a smart order routing system or route client orders to external liquidity providers. All orders are executed internally, with Bitpanda acting as principal in every transaction. While Bitpanda sources Virtual Assets from multiple liquidity providers, this activity is independent of client transactions and does not impact client order execution.

Liquidity Provider Relationships & Market Making Statement

Bitpanda sources liquidity from multiple third-party providers to manage its risk exposure. These liquidity providers operate independently and do not have direct

relationships with Bitpanda's clients. Bitpanda does not engage in proprietary market-making activities, nor does it trade against client positions.

Custody and Clearing Services for other VASPs

Bitpanda does not currently hold or maintain funds or Virtual Assets, nor provide clearing services, for other Virtual Asset Service Providers licensed by the Dubai Virtual Assets Regulatory Authority (VARA).

Client Asset Protection

Client Virtual Assets are safeguarded through Bitpanda's relationship with its sister company, Bitpanda Custody MENA DMCC ("**Bitpanda Custody**"). Bitpanda Custody provides custody infrastructure to Bitpanda which Bitpanda uses to maintain wallets for its customers. Client assets are fully segregated from Bitpanda's own corporate funds to ensure clear ownership and regulatory compliance.

Client withdrawals of fiat currency and Virtual Assets are processed in accordance with Bitpanda's internal policies and regulatory requirements. Withdrawal requests are subject to security checks, compliance verifications, and operational processing times. Settlement times may vary depending on banking hours, blockchain network congestion, or other external factors. Bitpanda reserves the right to delay or reject withdrawal requests if required under applicable law.

Referral and Introduction Arrangements

Bitpanda may refer or introduce clients to other entities within the corporate group of which Bitpanda is a part in order to provide services to Bitpanda clients. Such referrals are not made to external third-party virtual asset service providers (VASPs) or other financial entities. The commercial terms of these arrangements with members of the Bitpanda Group may include revenue-sharing agreements, reciprocal service arrangements, or other intra-group financial structuring considerations.
