

PREPARED FOR AURUMIX

Aurumix: Revenue Model Explainer

How the seven-year revenue, cost and funding model works, what it assumes and why, and how to use it.

Contents

Executive summary	1
1. How to read the model	2
2. Key results	4
3. Customers and gold	7
4. The six revenue streams	11
5. Costs, profit and funding	15
6. Scenarios, sensitivities and limits	19

Executive summary

The workbook models Aurumix from 2027 to 2033: customers in the UAE, Oman and Bahrain, and India, the gold they hold, six revenue streams, the cost base and the funding need. Headcount and tax are not yet in the costs, so every profit figure is an upper bound.

USD 4.49m

REVENUE IN Y7, FROM USD 32K IN Y1 (BASE CASE)

USD 2.29m

PEAK FUNDING NEED, REACHED AT THE END OF Y3

Y4

FIRST PROFITABLE YEAR; CUMULATIVE PROFIT TURNS POSITIVE IN Y6 (UPPER BOUND)

1

Three sources carry the revenue

In Y7 the B2B platform fee is 34.7% of revenue, the SIP entry fee 29.5% and cardholder fees 21.2%. The family plan adds 10.0%, the spot entry fee 2.4%, and interchange and lending 2.3% between them.

2

Customers who stop paying still count

A customer who stops contributing keeps their gold, their card and their credit line. By Y7 the book holds 71,208 paying customers and 130,638 holders, and the vault holds 403,565 grams worth USD 91.1m.

3

B2B partners are the largest single uncertainty

The five most sensitive inputs are all B2B inputs. With 5 partners by Y7 instead of 11, Y7 is roughly at break-even and the funding need rises to USD 3.23m. The first signed partner term sheet is the most valuable evidence the model could receive.

4

The profit line is an upper bound

Salaries, legal and trust costs and tax sit only inside a 15% contingency. A 30% contingency alone cuts Y7 profit from USD 0.85m to USD 0.37m. The real headcount figure will matter more than any other single input.

01

How to read the model

What the workbook covers, the two caveats on profit, and how to find your way around it.

1.1 Purpose and two caveats

- **The product.** A gold-backed savings product from Dubai, licensed by VARA. A 5% entry fee is taken on each contribution and 95% buys gold at one AURX per gram.
- **The model.** Seven years from January 2027: customers, gold, six revenue streams, costs and funding.
- **The method.** One set of inputs gives one answer. Three scenarios and four switches show how it moves.

Two caveats apply wherever profit appears:

- **Profit is an upper bound.** Headcount and tax are outside the cost base, covered only by a 15% contingency. Profit, payback and funding figures are all upper bounds.
- **Stream 1 rows show the full 5% entry fee.** The fabrication premium paid to the dealer is a separate cost-of-goods-sold line.

1.2 The colour code

COLOUR	MEANING	EDITABLE?
Blue text	Hardcoded inputs on Assumptions and Scenario Parameters	Yes. The only cells to change
Green text	Cross-sheet links to the live value on Scenario Parameters	No
Black text	In-sheet formulas	No

1.3 The five tabs

TAB	WHAT IT HOLDS
Cover	Scope, period structure and colour legend
Summary	Y1 to Y7 side by side, pulled from the Model
Assumptions	Every input with its value, unit and source note
Scenario Parameters	The least certain inputs in three scenarios, the selector (cell B6) and the four switches
Model	The engine over 29 periods: M1 to M24 (January 2027 to December 2028), then Y3 to Y7 (2029 to 2033)

1.4 Units

- Currency is USD. AED converts at the Central Bank peg of 3.6725 AED per USD.
- From Y3 each column is a full year. Flows are annual totals and balances are year-end positions.
- Tickets, CAC, card fees and the B2B fee stay in 2027 dollars. Only the gold price moves.

02

Key results

The seven-year Base case at a glance.

2.1 The seven-year picture (Base case)

Money figures in USD. Net profit is an upper bound, before headcount and tax.

	Y1	Y2	Y3	Y4	Y5	Y6	Y7
Revenue by stream							
1a Entry fee, SIP	26,885	114,194	308,423	584,044	931,153	1,201,849	1,326,088

Figure 1. Revenue by stream, Y1 to Y7 (Base case)

2.2 Takeaways

- Revenue reaches **USD 4.49m in Y7** and USD 14.68m over the seven years.
- B2B is the largest Y7 stream at 34.7%, ahead of the SIP entry fee (29.5%) and cardholder fees (21.2%).
- Stream 1 net of the fabrication premium is USD 1.11m in Y7.
- Net profit (upper bound) turns positive in Y4. Cumulative profit bottoms at -USD 1.43m in Y3 and turns positive in Y6.
- The **peak funding need is USD 2.29m** (upper bound), at the end of Y3.
- At Y7, 71,208 customers are paying and 130,638 are holders. The vault holds 403,565 grams, worth USD 91.1m (USD 57.1m at the launch price).

03

Customers and gold

How customers are won, kept and turned into gold.

3.1 How the engine works

Each region runs this balance every period:

opening paying customers + new customers - customers who stop paying = closing paying customers

- A customer who stops paying keeps their gold and moves to the **holders** balance.
- Paying customers plus holders always equals everyone ever acquired. A check row confirms it.
- Holders keep gold in the vault, sell back faster, and keep their card and credit line.

3.2 Regions and market size

REGION	WHO	OPENS	REACHABLE SIP ACCOUNTS
UAE	UAE residents of Indian and other South Asian origin	M1	142,637
Oman and Bahrain	Expatriate workers in Oman and Bahrain	M13	35,978
India	India-resident retail investors	M1	125,000
Total			303,615

- **Funnel.** Source population × 80% economically active (UAE only) × 57% payment capable × 40% money capable × penetration ceiling.
- **Source population.** UAE 4.36m Indian and 3.46m other South Asian, Oman and Bahrain 2.63m workers, India 12.5m gold investors.
- **Penetration ceiling (working assumption).** 10% UAE, 6% Oman and Bahrain, 1% India.
- **Cross-check.** The UAE ceiling is 1.90 times O Gold's 75,000 active users.
- **Saturation.** By Y7 India has used 83.5% of its ceiling, Oman and Bahrain 58.5%, the UAE 53.6%.

3.3 Acquisition channels

CHANNEL	BASE INPUTS	BASIS
Paid marketing	USD 90k in Y1 to 1.65m in Y7 (USD 5.16m total). UAE 74%, Oman and Bahrain 18%, India 8%	Management decision
Cost per acquired customer (CAC)	UAE USD 85, Oman and Bahrain USD 75, India USD 15 in Y1, falling to 55, 45 and 10	Dubai fintech USD 65-220. Ramp per client (2026-08-26)
Organic	A further 25% on paid signups	Client instruction
Referrals	0.6 a year per paying customer, 62% convert, from M13	Client instruction
Agents (India only)	40 in Y1 to 420 in Y7, 6 accounts a month each	Angel One's Authorised Person curve

- **Seasonality.** Monthly acquisition follows seasonal gold-buying peaks, damped to about ±25%. Annual totals are unchanged.

3.4 Retention

- **Persistency:** 55% of customers still pay twelve months after joining. Monthly churn is 4.86%.
- **Basis.** IRDAI life insurance persistency, adjusted down because a saver loses nothing by stopping.
- By Y7, 64.7% of everyone ever acquired are holders.

Figure 2. Paying customers and holders at year end, with active cards (Base case)

3.5 Activation calendar

ITEM	OPENS	WHY THEN
Streams 1a and 1b, entry fee	M1	The core product
Stream 3, family plan	M7	Needs the Digital Will build
Streams 2 and 4, card	M13	Needs a programme partner and Visa certification
Stream 5, lending	M13	Needs a lender and seasoned collateral
Stream 6, B2B	M13	Needs a signed partner
Referrals	M13	Referrers must first clear six payments
Oman and Bahrain	M13	Needs two more authorisations
India	M1	Assumes the payment route is solved

3.6 Gold assumptions

INPUT	BASE	BASIS
SIP ticket	USD 33.60 a month UAE, 26.00 Oman and Bahrain, 30.00 India	Joyalukkas and Malabar instalment schemes. AMFI SIP average USD 34
Gold price	USD 141.46 per gram at M1, +8.1% a year to USD 225.73 by Y7	Gold's compound growth since 1971
Buyback	6% of gold a year, × 1.6 for holders	PAXG's 5.9% annual turnover
Gold moved to own wallets	6% a year	Lowers collateral-eligible gold only

- **Gold under custody** is everything in the vault: USD 91.1m at Y7.
- **Collateral-eligible AUM** is the part that can back a credit line: USD 82.66m at Y7.

04

The six revenue streams

What each stream charges and why each value was chosen.

4.1 Stream 1: Entry fee (1a SIP, 1b spot)

In plain words: 1a = paying customers × monthly ticket × 5%. 1b = paying customers × spot attach × purchases per buyer × spot ticket × 5%.

Y7: USD 1,326,088 (1a) and USD 107,358 (1b). Both are the full fee. The ICS discount applies to the SIP fee only (section 5.2).

ASSUMPTION	BASE	REASON AND SOURCE
Entry fee	5% of each contribution	Client decision 9
Spot ticket	UAE USD 190, Oman and Bahrain USD 145, India USD 40	Botim gold AED 700, Augmont INR 3,300
Spot attach	12% UAE, 10% Oman and Bahrain, 35% India a year	Affordability, no benchmark
Frequency	1.7 purchases per buyer a year	About two seasonal buying occasions a year

4.2 Stream 2: Card interchange

In plain words: card spend × 1.80% interchange × Aurumix's 40% share.

Y7: USD 56,241 on USD 7.81m of card spend.

Who gets the card. The Gold Card is open to the whole book, with 18% take-up. The ICS tier sets only the benefits (fee discounts, FX rates, rebates). A customer who stops paying keeps the card and credit line, which only the collateral rules, the customer or the lender can close (decisions 54 and 57).

The chain in the model:

1. **Card-eligible base** = paying customers + holders (201,846 at Y7).
2. **Active cards** = 18% of that base (36,332 at Y7).
3. **Credit limit** = collateral-eligible gold per customer × 50% LTV (about USD 205).
4. **Spend per card** = limit × 50% drawn × 2.1 draws a year.
5. **Interchange** = spend × 1.80% × (1 - 60%).

ASSUMPTION	BASE	REASON AND SOURCE
Interchange	1.80% of spend	Visa UAE Gold rate, 18 October 2025
Programme manager share	60%, so Aurumix keeps 40%	Researched range 36-85%
Facility take-up	18% of the whole book	Client decision. First input to test
LTV and drawn share	50% and 50%	ICS design. Revolving facilities draw 40-55%

4.3 Stream 3: Family plan and Digital Will

In plain words: plan subscribers × (USD 50 + USD 6 for each beneficiary beyond the first).

Y7: USD 448,317 from 7,599 subscribers, about 10.7% of paying customers.

ASSUMPTION	BASE	REASON AND SOURCE
Price	USD 50 a year	Client instruction. Trust & Will charges USD 49
Extra beneficiary fee	USD 6 a year	Recovers AML check cost
Beneficiaries per plan	2.5	Large South Asian households
Attach	15% of new customers	Client instruction
Cancellation	25% a year	Within subscription benchmarks

4.4 Stream 4: Cardholder fees

In plain words: FX margin on foreign spend + ATM fees above the free allowance + issuance, reissue and replacement fees.

Y7: USD 952,508. ATM fees are 59.8%, issuance 18.5%, reissue and replacement 16.1% and FX margin 5.6%. The stream moves with the card count.

ASSUMPTION	BASE	REASON AND SOURCE
FX margin	2% of foreign spend, on a 34% foreign share	Market rate, four comparables
ATM	AED 1,000 a month free, 2% on the excess	About AED 4.80 per cardholder a month
Issuance	AED 75 per new card	Rate assumed
Reissue and replacement	6% a year at AED 75, 11% at AED 100	Industry loss rate 8-15%

4.5 Stream 5: Lending revenue share

In plain words: Aurumix's share of the origination fee on each draw + its share of the servicing fee on the average balance.

Y7: USD 44,524. A licensed partner funds the loans. Aurumix originates, services and collects.

ASSUMPTION	BASE	REASON AND SOURCE
Origination fee	1% of each draw, Aurumix takes 50%	1% from Finance House UAE gold loan Key Facts Statement. The 50% split is a working assumption
Servicing fee	0.5% a year of the drawn balance, Aurumix takes 70%	Working assumptions
Facility turnover	0.42	Manappuram's realised gold loan tenor of 71 days

4.6 Stream 6: B2B platform fee

In plain words: partners signed × gold held per partner × 0.75% a year.

Y7: USD 1,559,250 on USD 207.9m of partner gold from 11 partners, the largest stream.

Gulf wallets and exchange houses white-label Aurumix's gold infrastructure.

ASSUMPTION	BASE	REASON AND SOURCE
Partners	0, 1, 3, 5, 7, 9, 11 by Y1 to Y7	About 20 Gulf candidates. Win rate has no anchor
Active users per partner	900,000	Botim-scale and smaller wallets
Gold adoption	6%	O Gold's observed 4.4%, matured
Gold per adopting user	USD 350	Botim gold, about USD 363
Fee	0.75% a year	Top of the cited 0.5-0.75% band

Gold per partner is **USD 18.9m**, charged in full from signing.

05

Costs, profit and funding

Costs, profit, payback, capital and the funding need.

5.1 The cost base

LINE	BASIS	Y7 COST (USD)
Vault storage	0.12% a year, minimum USD 25 a day	110,238
VARA supervision	AED 400,000 a year	108,918
DMCC company licence	AED 20,265 a year	5,518
KYC and AML	USD 1.85 per verification	88,680
Insurance	USD 45,000 a year	45,000
Audit and attestation	USD 25,000 a year	25,000
Technology audit	USD 15,000 a year	15,000
Buyback handling	USD 1.85 per event	31,105
Technology build	USD 350,000 in Y1, 150,000 in Y2	0

LINE	BASIS	Y7 COST (USD)
Technology maintenance	USD 120,000 a year from Y3	120,000
Operating expenses		549,459
Fabrication premium (cost of goods sold)	1.5% over spot on net new grams	321,408
Acquisition	Marketing, agent commission, referral reward	1,787,063
ICS benefit costs	See 5.2	364,168
Card programme costs	See 5.3	149,822
Contingency	15% of all modelled costs	475,788
Total cost base		3,647,708

- Y1 operating expenses of USD 648,974 carry the technology build and one-off licensing.
- Blended acquisition cost is USD 37 per new customer in Y7.

5.2 ICS benefit costs

The Investor Conviction Score (ICS) rewards consistent saving with rising benefits. Each rate applies only to the **55% of customers who reach a benefit tier**, so the cost is roughly half the headline rate.

BENEFIT	RATE FOR QUALIFYING CUSTOMERS	Y7 COST (USD)
Entry fee discount	25% of the SIP fee	182,337
Card fee discount	20% of stream 4	104,776
Gold rebate	5% of card revenue	27,741
Family wallet and will discount	20% of stream 3	49,315
Total		364,168

- The total is 8.1% of Y7 revenue.
- Aurumix breaks even on the entry fee at a 71.5% discount.

5.3 Card programme costs

LINE	BASIS	Y7 COST (USD)
Platform and scheme fees	USD 30,000 a year	30,000
Programme setup	USD 50,000 one-off in M13	0
Card production and delivery	USD 4 per new card	34,513
Authorisation and switching	USD 0.03 per authorisation	9,705
Fraud and chargebacks	0.08% of spend	6,249
Cross-border scheme assessment	1.40% of cross-border spend	69,355
Total		149,822

- Card costs are 14.9% of card revenue in Y7. In Y2, costs of USD 91,599 exceed card revenue of USD 81,989.
- The cross-border assessment (0.89% of all card spend at Y7) exceeds Aurumix's 0.72% interchange share. The FX margin (USD 53k at Y7) covers the gap.

5.4 Contingency and missing costs

- **Contingency: 15%** of modelled costs, by client instruction. It stands in for headcount, legal, security, overhead, tax and minting.
- It falls short. Headcount alone is about USD 588,000 in Y1, against a Y1 contingency of USD 112,367.
- Minting costs roughly USD 8,500 a year on a layer-2 network by Y7, or about USD 1.7m on Ethereum mainnet.

5.5 Net profit and payback (upper bound)

- **Net profit** is -USD 829,064 in Y1, turns positive in Y4 (USD 260,844) and reaches **USD 846,578 in Y7**, an 18.8% margin.
- **Contribution per paying customer** rises from USD 19 in Y3 to USD 37 in Y7.
- **Payback:** 15.6 months in Y3, 8.9 in Y4, 8.4 in Y5, 9.9 in Y6 and 12.1 in Y7. It lengthens after Y5 as marketing keeps rising and saturation slows new customers.
- **Treadmill:** 1.8 new customers per net addition in Y1, 2.1 in Y3, 3.5 in Y6 and 7.5 in Y7.

Figure 4. Revenue, cost base and cumulative net profit, Y1 to Y7 (upper bound, before headcount and tax)

5.6 Funding, capital and float (upper bound)

- **Peak funding need: USD 2.29m** at the end of Y3: USD 1.43m of cumulative loss plus USD 864,412 of capital. It rises once headcount lands.
- **Regulatory capital: USD 571,818.** VA Issuance AED 1.5m plus Broker-Dealer AED 600,000, held on the balance sheet.
- **Gold float:** at least two 100 g bars. 200 g at M1, 3,406 g (USD 780,282) at Y7.
- **Card settlement prefunding:** USD 100,000 from M13.
- **Total capital tied up at Y7: USD 1,452,099.**

06

Scenarios, sensitivities and limits

How the answer moves, what the model leaves out, and how to use it.

6.1 Scenario results (Y7)

Aggressive and Conservative move every uncertain input at once, so both are unlikely outer bounds. Profit and funding rows are upper bounds.

Y7	CONSERVATIVE	BASE	AGGRESSIVE
Total revenue	USD 0.89m	USD 4.49m	USD 20.83m
Net profit	-USD 2.75m	USD 0.85m	USD 16.20m
Cumulative net profit	-USD 12.76m	USD 1.06m	USD 56.70m
Peak funding need	USD 14.32m	USD 2.29m	USD 1.65m
Paying customers	34,951	71,208	102,176
Gold under custody	USD 21.42m	USD 91.10m	USD 276.36m

In the Conservative case the business does not reach profit within seven years.

6.2 Structural switches

SWITCH	DEFAULT	Y7 EFFECT OF CHANGING IT
Holders keep the card	ON (decisions 54 and 57)	OFF: revenue USD 3.88m (-13.7%), net profit USD 0.58m. The fall is all in stream 4
Prepaid instead of credit	Credit	Prepaid: revenue USD 4.42m, net profit USD 0.78m
Fabrication premium borne by	Aurumix	Customer: net profit USD 1.22m, peak funding USD 2.14m
Premium on gross inflow	Net new	Gross: net profit USD 0.75m

6.3 Sensitivities

Each row moves one input to its Conservative and then Aggressive value, with everything else at Base. Base Y7 net profit is USD 0.85m and peak funding USD 2.29m (both upper bounds).

INPUT (CONSERVATIVE / BASE / AGGRESSIVE)	Y7 NET PROFIT, CONSERVATIVE	Y7 NET PROFIT, AGGRESSIVE	PEAK FUNDING, CONSERVATIVE
B2B partner gold adoption (3% / 6% / 10%)	USD 0.07m	USD 1.89m	USD 2.95m
B2B partner user base (0.5m / 0.9m / 1.4m)	USD 0.15m	USD 1.71m	USD 2.80m
B2B partners by Y7 (5 / 11 / 17)	-USD 4k	USD 1.70m	USD 3.23m
B2B gold per adopting user (USD 220 / 350 / 500)	USD 0.27m	USD 1.51m	USD 2.66m
B2B platform fee (0.50% / 0.75% / 0.90%)	USD 0.33m	USD 1.16m	USD 2.61m
Contingency (30% / 15% / 10%)	USD 0.37m	USD 1.01m	USD 2.78m
Facility take-up (8% / 18% / 30%)	USD 0.42m	USD 1.36m	USD 2.44m

INPUT (CONSERVATIVE / BASE / AGGRESSIVE)	Y7 NET PROFIT, CONSERVATIVE	Y7 NET PROFIT, AGGRESSIVE	PEAK FUNDING, CONSERVATIVE
Marketing CAC, all regions and years (UAE at launch: USD 140 / 85 / 55)	USD 0.55m	USD 1.09m	USD 2.40m
Persistence (45% / 55% / 65%)	USD 0.61m	USD 1.14m	USD 2.32m
Family plan attach (8% / 15% / 25%)	USD 0.66m	USD 1.11m	USD 2.36m
Technology build and maintenance (Y1 build: USD 600k / 350k / 200k)	USD 0.73m	USD 0.90m	USD 2.88m
Referral rate (0.25 / 0.6 / 1.1 a year)	USD 0.76m	USD 0.95m	USD 2.31m
Programme manager share (85% / 60% / 36%)	USD 0.81m	USD 0.88m	USD 2.30m
Gold price appreciation (0% / 8.1% / 12%)	USD 0.84m	USD 0.85m	USD 2.29m

The levers that matter most:

- **B2B.** The top five rows are B2B inputs. Each partner is worth USD 141,750 a year.
- **Missing costs.** A 30% contingency cuts Y7 profit to USD 0.37m.
- **Card take-up.** At 8%, Y7 profit falls to USD 0.42m.
- **Retention.** At 45% persistency Y7 paying customers fall to 54,457.

6.4 The workbook and the Phase 5 simulation

- **The workbook** is one deterministic path. Use it to understand and change the plan.
- **The simulation** runs individual customers 2,000 times. Use it to decide how much to raise.
- **Shared inputs.** 55% persistency and the 55% benefit-tier share. The workbook and simulation reconcile line by line at Y7.

6.5 Limitations and working assumptions

- **Incomplete costs.** Profit, payback and peak funding are upper bounds.
- **One average customer** and annual periods from Y3.
- **Frozen prices** in 2027 dollars while gold rises 8.1% a year.
- **No B2B adoption ramp** and flat technology maintenance.
- **India's payment route is assumed solved.** India is 30.2% of Y7 revenue.

These inputs rest on judgement or client instruction:

INPUT	BASE	WHAT WOULD CONFIRM IT
Penetration ceilings	10% / 6% / 1%	First-year sign-up rates
Referral rate	0.6 a year	First 12 months of referral data
Organic share	25%	Launch campaign attribution
Facility take-up	18% of the book	First card cohorts
Spot attach and frequency	12% / 10% / 35%; 1.7 a year	First seasonal peak
Family plan attach and cancellation	15%; 25% a year	Take-up at the M7 launch
Holder buyback multiplier	1.6	Buyback behaviour of lapsed customers
B2B partner count	11 by Y7	Signed term sheets

6.6 Conventions and using the workbook

- **Y1 and Y2 ratio rows** on the Summary are M12 and M24 month-end run rates.
- **Oman and Bahrain marketing** (18% of the budget) is spent from M1, but the region opens at M13, so its Y1 spend acquires no customers.
- **Buyback earns no revenue.** VARA forbids any fee on redemption.
- **Edit blue cells only.** Uncertain inputs sit on Scenario Parameters, fixed inputs on Assumptions.
- **Switch scenario** in cell B6. Switches sit in rows 130 to 133.
- **Checks.** `verify_model.py` runs 219 checks on the recalculated workbook.

Glossary

TERM	MEANING
AURX	Aurumix's token. One AURX is one gram of allocated gold
Buyback	The customer exit: Aurumix buys the gold back for cash
CAC	Marketing spend per customer acquired through paid marketing
Collateral-eligible AUM	Gold that can back a credit line
Fabrication premium	What the dealer charges above spot for 100 g bars
Float	Aurumix's own whole bars, so customers can buy fractions of a gram
Holder	A customer who has stopped paying and keeps their gold, card and credit line
ICS	Investor Conviction Score. Sets each customer's benefits

TERM	MEANING
Interchange	The fee a merchant's bank pays the card issuer on each purchase
LTV	Loan-to-value: the credit limit as a share of the gold pledged
Peak funding need	The largest total, at any point, of cumulative losses plus capital tied up
Persistency	The share of customers still paying twelve months after joining
Programme manager	The licensed partner that runs the card programme
Redemption	The legal category the buyback falls under. VARA forbids any fee on it
SIP	Systematic Investment Plan, the monthly savings commitment
